

REFRIGERATION RECOMMISSIONING  
COLORADO

## Refrigeration Recommissioning Service Providers

Our Refrigeration Recommissioning program provides a detailed investigation of all the components of your refrigeration system—display cases, compressors and condensers. It also looks at operating conditions such as suction and discharge temperatures. The goal is to ensure that all are operating correctly and optimally.

If you're interested in discovering how your existing facility's refrigeration systems could run better and save energy, you can contact one of the refrigeration recommissioning providers listed below or another provider of your choice. The service providers listed have submitted and completed projects in the past that we approved.

**PLEASE NOTE:** This list does not constitute an endorsement of these providers, nor does it certify or guarantee their work. Refrigeration recommissioning service providers are not employees or agents of Xcel Energy.
