**DIRECT TESTIMONY AND ATTACHMENTS OF CONNIE L. PAOLETTI**

1 I. **INTRODUCTION, QUALIFICATIONS, PURPOSE OF TESTIMONY, AND**  
2 **RECOMMENDATIONS**

3 Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.

4 A. My name is Connie L. Paoletti. My business address is 1800 Larimer Street,  
5 Denver, Colorado 80202.

6 Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT POSITION?

7 A. I am employed by Xcel Energy Services Inc. ("XES") as the Manager of  
8 Transmission Planning for Public Service Company of Colorado ("Public Service"  
9 or the "Company"). XES is a wholly owned subsidiary of Xcel Energy Inc. ("Xcel  
10 Energy") and provides an array of support services to Public Service and the other  
11 utility operating company subsidiaries of Xcel Energy on a coordinated basis.

12 Q. ON WHOSE BEHALF ARE YOU TESTIFYING IN THE PROCEEDING?

13 A. I am testifying on behalf of Public Service.

1 **Q. PLEASE SUMMARIZE YOUR RESPONSIBILITIES AND QUALIFICATIONS.**

2 A. As Manager of Transmission Planning, I am responsible for overseeing the  
3 engineering group responsible for planning Public Service's transmission system  
4 and also responsible for the development of Transmission budgets, regulatory  
5 compliance, and portions of the Operations & Maintenance ("O&M") associated  
6 with Public Service's transmission system. I also oversee various aspects of  
7 transmission policy and manage participation in key regional Public Service  
8 transmission projects, as well as other regional projects on and adjacent to Public  
9 Service's transmission system. This includes conducting strategic analyses for  
10 potential transmission projects, evaluating and negotiating joint agreements, and  
11 engaging in stakeholder outreach. A description of my qualifications, duties, and  
12 responsibilities is set forth in my Statement of Qualifications at the conclusion of  
13 my Direct Testimony.

14 **Q. WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?**

15 A. The purpose of my Direct Testimony is to: (1) support the \$523.5 million in  
16 Transmission plant additions and projected additions for September 1, 2019 to  
17 December 31, 2022 since the Company's last electric rate case in Proceeding No.  
18 19AL-0268E ("2019 Electric Phase I"); and (2) support the \$27.4 million in  
19 Transmission 2020 O&M, which serves as the basis for the 2022 Future Test Year  
20 ("FTY"). All of these are appropriately allocated to Public Service retail electric and  
21 included in the cost of service that is presented by Company witness Ms. Deborah  
22 A. Blair. These amounts do not include any plant additions or O&M associated

1 with the Company's Wildfire Mitigation Plan ("WMP"), which Company witness Ms.  
2 Sandra L. Johnson supports.

3 I also describe Public Service's use of third-party wheeling service to  
4 transmit power to serve its customers as well as the costs for these services, and  
5 I support the FTY adjustments for Transmission Wheeling Services included in the  
6 2022 FTY.

7 **Q. ARE YOU SPONSORING ANY ATTACHMENTS AS PART OF YOUR DIRECT**  
8 **TESTIMONY?**

9 A. Yes, I am sponsoring Attachments CLP-1 through CLP-7, which were prepared by  
10 me or under my direct supervision. The attachments are as follows:

- 11 • Attachment CLP-1: Transmission Capital Additions for September 1,  
12 2019 – December 31, 2020;
- 13 • Attachment CLP-2: Transmission Capital Additions for January 1,  
14 2021 – December 31, 2022;
- 15 • Attachment CLP-3: Pawnee-Daniels Park Project Semi-Annual Status  
16 Report Dated January 23, 2020;
- 17 • Attachment CLP-4: Transmission 2020 O&M Expenses by Cost  
18 Element;
- 19 • Attachment CLP-5: Transmission 2020 O&M Expenses by FERC;
- 20 • Attachment CLP-6: Public Service Wheeling Transactions; and,
- 21 • Attachment CLP-7: WAPA 110 MW Reservation Costs.

22 **Q. WHAT RECOMMENDATIONS ARE YOU MAKING IN YOUR DIRECT**  
23 **TESTIMONY?**

24 A. As part of approving the cost of service developed by Ms. Blair, I recommend that  
25 the Colorado Public Utilities Commission ("Commission") authorize base rate

1 recovery of the September 1, 2019 to December 31, 2022 capital additions and  
2 2020 O&M expenses included in the 2022 FTY. Last, I recommend the  
3 Commission include the FTY adjustments for Transmission Wheeling Services in  
4 the Company's cost of service.

1 **II. TRANSMISSION BUSINESS AREA OVERVIEW, FUNCTIONS, AND ACTIVITIES**

2 **Q. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR DIRECT TESTIMONY?**

3 A. The purpose of this section of my Direct Testimony is to provide an overview of  
4 Public Service's Transmission Business Area (or "Transmission") functions and  
5 activities.

6 **Q. PLEASE PROVIDE AN OVERVIEW OF PUBLIC SERVICE'S TRANSMISSION**  
7 **SYSTEM.**

8 A. Public Service is a vertically integrated electric utility that owns and operates  
9 electric transmission facilities in Colorado. The Company uses its transmission  
10 system to deliver energy from our generating resources (both owned and  
11 purchased) to our wholesale and large retail customers, and to the Company's  
12 distribution facilities, which are used to provide service to most of our retail  
13 customers. Public Service's transmission system comprises approximately 4,867  
14 circuit-miles of transmission lines. The transmission lines are rated at voltages  
15 between 44 kilovolt ("kV") and 345 kV. Public Service's transmission system  
16 includes many lines that are jointly-owned with neighboring systems, such as Tri-  
17 State Generation and Transmission Association, Inc. ("Tri-State") and the Western  
18 Area Power Administration ("WAPA"). The Company's 236 transmission and  
19 distribution substations are also used to deliver electric energy to customers.

1 **Q. PLEASE DESCRIBE THE TRANSMISSION BUSINESS AREA.**

2 A. The Transmission Business Area plans, constructs, operates, and maintains the  
3 electric transmission infrastructure necessary to meet the current and future  
4 energy needs of our customers in a safe and reliable manner.

5 **Q. PLEASE DESCRIBE THE DEPARTMENTS WITHIN THE COMPANY'S**  
6 **TRANSMISSION ORGANIZATION AND THEIR KEY FUNCTIONS.**

7 A. There are six departments within the Company's Transmission organization. The  
8 key functions of these departments are as follows:

9 • *Asset management* is responsible for substation field engineering, which  
10 includes routine and emergency maintenance and operational activities  
11 for all Public Service substations. The organization also provides field  
12 implementation of certain North American Electric Reliability  
13 Corporation ("NERC") and Critical Infrastructure Protection ("CIP")  
14 compliance activities, and commissioning new substation facilities.  
15 Commissioning of substation facilities involves ensuring that our  
16 substation facilities meet Federal Energy Regulatory Commission  
17 ("FERC"), NERC, and Company operational and reliability requirements.  
18 The Quality Assurance/Quality Control ("QA/QC") process performed by  
19 Company engineers and technicians tests the equipment and control  
20 systems of our electric substations prior to energizing. This organization  
21 is also responsible for system sustainability. System sustainability  
22 provides, among other things, electric material and design standards for  
23 the design, construction, and maintenance of our transmission assets  
24 by interpreting industry standards such as American National Standards  
25 Institute ("ANSI") standards. System sustainability is also responsible  
26 for developing Public Service's reliability-centered maintenance  
27 programs that ensure the health and reliability of existing assets. These  
28 processes establish the baseline performance expected by our  
29 operations and maintenance organizations and confirm the performance  
30 for compliance standards.

31 • *Transmission strategy and planning* is responsible for: (1) life cycle  
32 planning, transmission system planning, and associated capital  
33 budgeting; (2) negotiating transmission-service-related contracts with  
34 generators, transmission owners, and distribution utilities; and (3)  
35 resolving wholesale customer transmissions service concerns. In  
36 addition, this organization manages Xcel Energy's participation in key

1 regional projects throughout its service territories, as well as other  
2 regional projects on and adjacent to the Company's transmission  
3 systems, including the Public Service Transmission System. This group  
4 is also responsible for the Company's policies and procedures in the  
5 competitive transmission acquisition processes.

- 6 • *Field operations* provides field services for construction, maintenance,  
7 and emergency repairs for transmission assets.

- 8 • *Transmission portfolio delivery* is responsible for managing capital  
9 projects, programs, and portfolios, including designing and engineering  
10 transmission assets, managing third-party contractors, and securing and  
11 managing transmission land rights.

- 12 • *System operations* is primarily responsible for the NERC Balancing  
13 Authority and Transmission Operations function for all Company  
14 transmission systems.

- 15 • *Transmission business operations* directs the Transmission business  
16 area's efforts pertaining to compliance with NERC requirements and  
17 directs business performance achievement efforts.

1 **III. TRANSMISSION CAPITAL BUDGET, PROJECT SELECTION, AND FUNDING**

2 **Q. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR DIRECT TESTIMONY?**

3 A. The purpose of this section of my Direct Testimony is to provide an overview of the  
4 primary drivers of the Transmission Business Area's capital additions included in  
5 this rate case proceeding, and the Transmission Business Area's project  
6 development, project budgeting, and project management processes.

7 **Q. WHAT ARE THE PRIMARY DRIVERS AFFECTING THE LEVEL OF PUBLIC**  
8 **SERVICE'S TRANSMISSION CAPITAL ADDITIONS INCLUDED IN THIS RATE**  
9 **CASE PROCEEDING?**

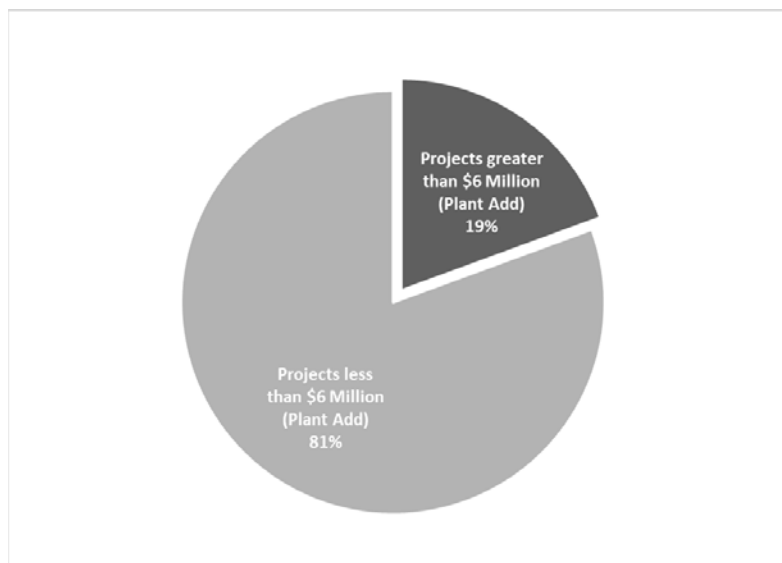

10 A. Transmission capital additions generally fall into two major types. The first consists  
11 of large capital projects that are often multi-year projects. These projects are  
12 capital intensive and are aimed at improving the transmission system, upgrading  
13 existing facilities to meet NERC compliance requirements and to accommodate  
14 new generation, replacing aging facilities, and making improvements to  
15 communication infrastructure and physical security.

16 In addition to these larger, multi-year capital projects, the Transmission  
17 Business Area also completes many smaller capital projects each year. These  
18 smaller projects comprise a majority of the total number of projects that we  
19 complete each year, but make up only a minor part of our overall capital budget.  
20 Some examples of smaller projects include replacement of one to two structures  
21 or cross-arms due to age, condition, or storm damage.

1 Both of these types of capital projects require investments in transmission  
2 line components such as poles, conductors, gang-operated switches, and land  
3 rights for transmission line easements. They also include investments in  
4 substation components such as transformers, capacitor banks, circuit breakers,  
5 remote terminal units, and real property.

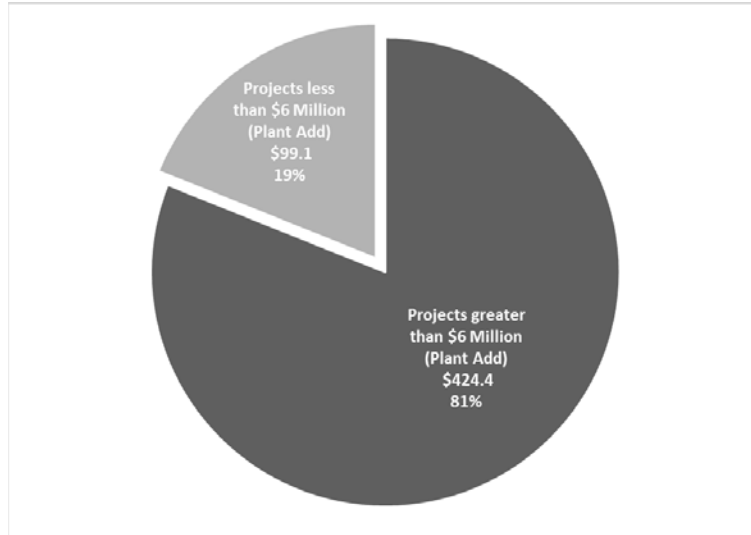

6 Figures CLP-D-1 and CLP-D-2 below depict this breakdown for Public  
7 Service's 2019-2022 capital additions that it is seeking to recover through base  
8 rates in this proceeding. As shown in these figures, capital projects that are greater  
9 than \$6 million in capital additions make up approximately 80 percent of Public  
10 Service's total capital additions budget over the time period of this case, but  
11 comprise approximately 20 percent of the total number of projects undertaken or  
12 to be undertaken during this timeframe.

13 **FIGURE CLP-D-1:**  
14 **2019-2022 Total Number of Transmission Capital Projects**  
15 **(Dollars in Millions)**

1  
2  
3

**FIGURE CLP-D-2:  
2019-2022 Total Transmission Capital Budget  
(Dollars in Millions)**

4 **Q. WHAT ARE THE CORE CAPITAL BUDGET GROUPINGS THAT REFLECT THE**  
5 **GENERAL CATEGORIES OF SPEND WITHIN THE TRANSMISSION**  
6 **BUSINESS AREA?**

7 **A.** Based on these drivers, Transmission's capital projects generally fall into six  
8 capital budget groupings depending on the main purpose of the project. These  
9 groupings are: (1) Asset Renewal; (2) Reliability Requirement; (3) Regional  
10 Expansion; (4) Interconnection; (5) Physical Security and Resiliency; and  
11 (6) Communication Infrastructure. I provide more detail on each of these  
12 categories below.

- 13 • *Asset Renewal:* This category is primarily for managing the health and  
14 performance of transmission assets. The main goal is to ensure that  
15 critical assets including transmission lines, substations, and other  
16 related assets meet reliability and capacity requirements, while  
17 minimizing life-cycle costs. This includes planned replacement of aging  
18 transmission lines and substation equipment, and unplanned  
19 replacement of lines or equipment damaged by storms. This category

1 also includes additions to, or replacement of, aging fleet vehicles and  
2 tools that support capital additions and line relocations due to road  
3 projects.

- 4
- 5 • *Reliability Requirement:* Reliability projects are constructed to ensure  
6 that the transmission system is compliant with all NERC reliability  
7 standards. Compliance with NERC reliability standards is mandatory for  
8 all users, owners, and operators of the Bulk Electric System (“BES”).  
9 FERC, NERC, and regional reliability entities monitor and enforce  
10 compliance. The Transmission organization is continually studying the  
11 transmission system to assess compliance with NERC standards.  
12 These studies analyze the impacts of forecasted load growth, existing  
13 and anticipated generation needs, and new generation interconnections  
to determine whether transmission upgrades are necessary.

- 14
- 15 • *Regional Expansion:* This category includes major high voltage  
16 transmission line projects that are developed through the regional  
17 planning process and seek to serve multiple needs including regional  
18 and local reliability and renewable energy development. Generally,  
19 these are multi-year initiatives and the types of projects for which the  
20 Company seeks a Certificate of Public Convenience and Necessity  
 (“CPCN”) from the Commission.

- 21
- 22 • *Interconnection:* This category includes projects that the Company is  
23 required to construct under the FERC Open Access Transmission Tariff  
24 (“OATT”) to accommodate interconnection requests from generators,  
other transmission providers for their transmission lines, and new load.

- 25
- 26 • *Physical Security and Resiliency:* There are two critical aspects to this  
27 grouping of projects: physical security and grid resiliency. Physical  
28 security addresses physical threats to utility infrastructure, such as  
29 transmission lines and substation equipment. Grid resiliency addresses  
30 the Company’s ability to monitor and recover from incidents occurring  
31 on our system to limit disturbances that may leave our service territory  
32 exposed to prolonged outages, oftentimes by adding redundancy to our  
33 transmission system. This category also includes projects intended to  
address NERC standards related to security and grid resiliency.

- 34
- 35 • *Communication Infrastructure:* This category includes the fiber optic  
36 and communication network infrastructure build-out on the existing  
37 transmission system to improve communication connectivity for all  
38 business areas. This infrastructure allows the digital transfer of  
39 Supervisory Control and Data Acquisition (“SCADA”) data and tele-  
40 protection services. As telecommunication service providers are retiring  
the existing obsolete analog connections, we will be continuing our

1 efforts to privatize our communication network infrastructure across the  
2 Company's service territory. By reducing dependencies on third-party  
3 telecommunications providers and building our own, the transmission  
4 system communication infrastructure improves the transmission and  
5 distribution system reliability, performance, and cyber security.

6 **Q. PLEASE OUTLINE HOW PUBLIC SERVICE DEVELOPS ITS CAPITAL**  
7 **BUDGET FOR ITS TRANSMISSION BUSINESS AREA.**

8 A. The annual capital budget for Transmission is based on collaboration between  
9 corporate management of overall Company finances and the business needs that  
10 are identified by Transmission. Company witness Mr. Adam R. Dietenberger  
11 explains how the Company establishes overall business area capital spending  
12 guidelines and budgets based on financing availability, specific needs of business  
13 areas, and the overall needs of the Company.

14 **Q. CAN YOU PROVIDE A SUMMARY OF TRANSMISSION'S CAPITAL**  
15 **BUDGETING PROCESS?**

16 A. Transmission employs a "bottom-up" budgeting process to identify the capital  
17 projects that we need to complete within a specific year for our business area. All  
18 of our capital projects are executed under the Capital Project Governance Process.  
19 This governance process has policies and procedures in place that enable  
20 Transmission to prioritize and balance our budget such that we appropriately  
21 allocate funds. Our capital budgeting process includes four main steps:

- 22 1. Identification of potential projects;
- 23 2. Vetting of potential projects;
- 24 3. Prioritization of potential projects; and

1                   4. Rebalancing and reprioritization of projects based on corporate budget  
2                   requirements.

3   **Q.   PLEASE EXPLAIN HOW THE TRANSMISSION BUSINESS AREA RANKS AND**  
4   **FUNDS PROJECTS.**

5   A.   The Transmission Business Area uses a multi-step project lifecycle process that  
6   takes a project from the identification of a need, through mitigation development,  
7   alternative evaluation, preliminary scope development, and cost estimating, before  
8   concluding with final scope approval.

9                The project originator develops a proposed statement of work for each  
10   project—typically consisting of the proposed scope, project description, necessity  
11   description, alternatives and proposed option, desired completion date,  
12   consequences of not pursuing the project, and a basic electric circuit diagram.

13              Multi-disciplinary project teams are established with members who have  
14   functional skills such as financial management, project management and controls,  
15   design and engineering, system operations, construction, siting and land rights,  
16   scheduling, and planning. Each project team is assembled to review the proposed  
17   scope and evaluate alternatives, and then to identify additional details for the  
18   preliminary scope and schedule, along with supporting documentation. The  
19   project team may prepare multiple higher-level estimates to assess alternative  
20   system solutions, and weigh proposed solutions against other alternatives. This  
21   determines the most reasonable electrical and financial solution that meets  
22   transmission needs as part of the overall planning process. The estimates for each

1 proposed project may be included in the latter years of the Transmission Business  
2 Area's five-year budget.

3 Once the conceptual electric solutions are identified, the Transmission  
4 Business Area reviews the capital projects to select those projects that best meet  
5 the system's reliability needs and contractual and regulatory obligations. The  
6 Transmission Business Area then assesses risks for the projects and captures  
7 project requirements, project scope, preliminary cost estimates, and required in-  
8 service date information.

9 All capital projects are then prioritized. Key drivers for risk prioritization  
10 strategy include reliability, regulatory compliance, contractual agreements, and  
11 economic, security, and other risk factors. The risk assessment process  
12 categorizes projects as "discretionary" or "non-discretionary." Discretionary  
13 projects are prioritized based on the risk and urgency. Non-discretionary projects  
14 include emergency related work, contractual agreements, regulatory compliance,  
15 and other mandates.

16 **Q. WHAT PROCESS DOES THE TRANSMISSION BUSINESS AREA FOLLOW TO**  
17 **MANAGE AND CONTAIN ITS CAPITAL COSTS?**

18 A. The Transmission Business Area reviews capital projects on a monthly basis after  
19 approval to compare the monthly budget to actual funds spent, and forecast at  
20 completion to total project budget. We perform a monthly project-forecasting  
21 exercise to ensure we have a steady and dependable flow of financial information  
22 regarding capital expenditures. Through this process, the entire Transmission  
23 Business Area project portfolio is reviewed and consolidated each month and any

1 variances are addressed. All projects that indicate they may be outside of allowed  
2 variances are re-evaluated and assessed internally by the Transmission  
3 organization, and may be escalated for higher-level corporate review. For larger  
4 projects (*i.e.*, those greater than or equal to \$10 million), we adhere to corporate  
5 governance to seek “re-approval” of projects outside the allowed variances.

6 Transmission also compares year-to-date actual performance with year-to-  
7 date and year-end forecasts. We identify deviations and recommendations to  
8 make sure financial targets are reviewed and approved. Changes are reported to  
9 the Financial Performance and Planning Business Area, which monitors capital  
10 spending. The Transmission Business Area is expected to manage its capital  
11 budget once that budget has been developed, vetted, and approved.

12 **Q. HOW IS THE COMMISSION INFORMED OF TRANSMISSION PROJECTS?**

13 A. On an annual basis, Public Service provides the Commission with its Rule 3206  
14 Report, which identifies new construction or expansion of transmission facilities  
15 planned for the upcoming three calendar years. The report consists of three major  
16 sections: (1) new projects; (2) projects presumed to be in the ordinary course of  
17 business; and (3) projects previously reported. The intent of Rule 3206 is to have  
18 utilities apprise the Commission of planned transmission projects, and to allow the  
19 Commission to verify or determine which projects require or do not require a  
20 CPCN. Public Service submits its Rule 3206 Report annually on April 30, and filed  
21 its most recent Rule 3206 Report in Proceeding No. 21M-0005E.<sup>1</sup>

---

<sup>1</sup> The Commission noticed the Company’s Rule 3206 Report filing on May 13, 2021 (mailed date) by Decision No. C21-0290-I, instructing interested parties to file comments on or before June 15, 2021. No parties filed comments and the Commission has not issued a final decision.

1           Additionally, Rules 3625, 3626, and 3627 set forth requirements for  
2 transmission planning applicable to Commission-regulated utilities. These rules  
3 require these utilities to establish a process to coordinate the planning of additional  
4 electric transmission in Colorado in a comprehensive and transparent manner.  
5 The process is to be conducted on a statewide basis and takes into account input  
6 received from interested stakeholders. The Commission's rules require periodic  
7 reporting to the Commission. Public Service and the other Commission-regulated  
8 utilities jointly submit a Rule 3627 10-Year Transmission Plan bi-annually on  
9 February 1 in even years, the most recent of which was filed in Proceeding No.  
10 20M-0008E.<sup>2</sup> These Rule 3267 Plans are the result of a cooperative effort  
11 between Black Hills Colorado Electric, LLC d/b/a Black Hills Energy, Tri-State, and  
12 Public Service. The Commission is further informed of our transmission projects  
13 through the Company's annual Transmission Cost Adjustment ("TCA") filing, which  
14 occurs in November, as well as individual CPCN filings made with the Commission  
15 as appropriate.

16 **Q. CAN YOU FURTHER DESCRIBE THE TCA?**

17 **A.** Certainly. The TCA is the mechanism through which the Company recovers its  
18 transmission capital expenses. Each year the Company requests recovery of its  
19 transmission capital expenses through its TCA filings, where the Commission has  
20 the opportunity to review the Company's forecasted transmission capital  
21 expenses. The Company's TCA was approved by Decision No. C07-1085 in

---

<sup>2</sup> By Decision No. R21-0073, the Commission found the Joint Utilities' Rule 3627 10-Year Transmission Plan to be adequate and in compliance with Rule 3627. Decision No. R21-0073, at ordering ¶ 1 (mailed Feb. 11, 2021) (the Recommended Decision went into effect by operation of law).

1 Proceeding No. 07A-339E, and the TCA tariff is set forth on Sheet Nos. 142-142C,  
2 COLO. PUC No. 8 - Electric. Among other things, the TCA tariff provides that  
3 “[w]henever the Company implements changes in base rates as the result of a final  
4 order in an electric Phase I rate case, it shall simultaneously adjust the TCA to  
5 remove all costs that have been included in base rates.” Here, Public Service is  
6 proposing to roll into base rates the rolling balance of costs currently being  
7 recovered through the TCA. Company witness Ms. Blair discusses the Company’s  
8 proposed TCA roll-in in more detail in her Direct Testimony.

1 **IV. TRANSMISSION CAPITAL ADDITIONS AND FORECASTED ADDITIONS FOR**  
2 **SEPTEMBER 1, 2019 TO DECEMBER 31, 2022**

3 **Q. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR DIRECT TESTIMONY?**

4 A. The purpose of this section of my Direct Testimony is to provide an overview of the  
5 Transmission Business Area's capital additions and projected capital additions  
6 over the period September 1, 2019 to December 31, 2022.

7 **Q. WHAT IS THE TOTAL DOLLAR AMOUNT OF TRANSMISSION CAPITAL**  
8 **ADDITIONS THAT YOU ARE SUPPORTING IN THIS CASE?**

9 A. As reflected in Attachments CLP-1 and CLP-2, the Company is seeking recovery  
10 of \$523.5 million for Transmission Business Area capital additions for September  
11 1, 2019 to December 31, 2022. In this section, I discuss the Company's  
12 September 1, 2019 to December 31, 2022 capital additions.

13 **Q. PLEASE EXPLAIN THE INFORMATION PROVIDED IN ATTACHMENTS CLP-1**  
14 **AND CLP-2.**

15 A. Attachment CLP-1 shows the Transmission Business Area's capital additions for  
16 plant placed into service from September 1, 2019 through December 31, 2020,  
17 and Attachment CLP-2 shows the Transmission Business Area's capital additions  
18 for plant projected to be placed into service from January 1, 2021 through  
19 December 31, 2022. Table CLP-D-1 below provides the total capital additions from  
20 these periods broken out into the groupings identified above. Throughout my  
21 Direct Testimony, capital additions data from 2019 and 2020 represent actual  
22 costs, while 2021 and 2022 capital additions include actual plant in service for  
23 January 2021 and budgeted data for the remainder of 2021 and all of 2022.

1  
2  
3  
4

**TABLE CLP-D-1:  
 Transmission’s 2019-2022 Capital Additions\*  
 Public Service - Electric  
 (Dollars in Millions)**

<b>Category</b>	<b>9/1/2019 through 12/31/2019 Actual</b>	<b>2020 Actual</b>	<b>2021 (January Actual + Forecast)</b>	<b>2022 Forecast</b>	<b>Total</b>
<b>Asset Renewal</b>	\$36.2	\$57.0	\$71.6	\$85.5	\$250.3
<b>Reliability Requirements</b>	\$11.1	\$14.7	\$30.2	\$48.9	\$104.9
<b>Regional Expansion</b>	\$82.0	\$4.2	\$(0.3) <sup>3</sup>	--	\$85.9
<b>Interconnection</b>	\$1.3	\$32.3	\$3.0	--	\$36.5
<b>Physical Security and Resiliency</b>	\$0.3	\$8.0	\$9.4	\$18.5	\$36.1
<b>Communication Infrastructure</b>	\$0.7	\$1.2	\$2.2	\$5.7	\$9.7
<b>Total</b>	\$131.6	\$117.3	\$116.0	\$158.5	\$523.5
<i>*There may be differences between the sum of the individual category amounts and totals due to rounding.</i>					

5           The figures in Table CLP-D-1 are stated on a Public Service – Electric basis  
 6           with no common electric/gas projects. As I mentioned earlier, the Transmission  
 7           Business Area’s capital additions tend to be either (1) large, multi-year investments  
 8           or (2) smaller, annual capital investments. Below I discuss some of the largest  
 9           Transmission projects Public Service has placed into service or will place into  
 10          service during the period September 1, 2019 to December 31, 2022. Namely,

<sup>3</sup> The \$300,000 credit is due to reclassification of CWIP to RWIP during project close-out.

1 below I identify and discuss the projects that comprise approximately 80 percent  
2 (or more) of Public Service's total capital additions for each of the categories  
3 described above between September 1, 2019 and December 31, 2022.

4 **A. Asset Renewal**

5 **Q. PLEASE DISCUSS THE PRIMARY DRIVERS OF TRANSMISSION CAPITAL**  
6 **ADDITIONS RELATED TO ASSET RENEWAL SINCE SEPTEMBER 1, 2019**  
7 **AND PROJECTED THROUGH DECEMBER 31, 2022.**

8 A. The total capital additions for Asset Renewal projects for September 1, 2019 to  
9 December 31, 2022 are \$250.3 million. Examples of major projects related to  
10 Asset Renewal over this period include:

- 11 • *ELR Projects:* End-of-Life Replacement ("ELR") projects encompass a  
12 variety of breaker, relay, transformer, and line structure component  
13 replacements. The Company identifies facilities in need of replacement  
14 or refurbishment based on multiple factors. For transmission lines,  
15 these factors include: the importance of a particular line to reliably serve  
16 customers, the line's age and condition, and the line's reliability history.  
17 These factors are assigned different weights to determine which lines  
18 are in the greatest need for replacement. The Company prioritizes  
19 substation assets based on system criticality and asset condition. The  
20 priority list is then used to determine the urgency of each replacement  
21 and identifies specific projects. The Company plans to place in service  
22 \$73.6 million attributable to ELR projects from September 1, 2019  
23 through 2022.
- 24 • *Storms and Emergency ("S&E") Public Service (Subs and Line):* S&E  
25 (Subs and Line) are projects associated with necessary work in  
26 response to weather events, accidents, and other unscheduled  
27 maintenance work that if not completed puts the system at imminent risk  
28 of failure. The Company routinely experiences the need to perform work  
29 in this category. The Company plans to place in service \$46.1 million  
30 attributable to the S&E (Subs and Line) from for September 1, 2019  
31 through 2022.
- 32 • *Public Service Major Line Rebuilds and Refurbishment:* Major Line  
33 Rebuilds and Refurbishment projects include large scale projects for

1 refurbishing or rebuilding lines that have reached end of life. Projects  
2 are identified through field inspections and involve multiple  
3 replacements or require a total rebuild of the line. The Company plans  
4 to place in service \$35.6 million attributable to Major Line Rebuild &  
5 Refurbishment projects from September 1, 2019 through 2022. All other  
6 Rebuild and Refurbishment projects specifically identified elsewhere in  
7 my testimony are not included in the total \$35.6 million identified here.

- 8
- 9 • *9255 Major Line Rebuild:* The rebuild is approximately 20 miles long  
10 between Otero tap and Malta Substation. This portion of Circuit 9255  
11 contains wood structures from the 1960s with heavily deteriorated poles  
12 and cross-arms. Single circuit 115kV self-weathering steel H-frame  
13 structures, 477 kcmil Hawk Aluminum Conductor Steel Supported  
14 (“ACSS”) conductor, 48 Fiber optical ground wire (“OPGW”), and 3/8”  
15 Extra High Strength (“EHS”) Steel will be installed for this rebuild. The  
16 total capital addition amount projected to be placed in service for this  
project in 2022 is \$19.2 million.

- 17
- 18 • *9205 Boulder Hydro - Structure 1398 Aging Line Rebuild:* The rebuild is  
19 approximately 3.5 miles long. This portion of Circuit 9205 contains  
20 deteriorating structures that date back to 1910. Single circuit 115kV self-  
21 weathering steel monopoles will be installed as well as new 477 kcmil  
22 Hawk ACSS conductor and 48 Fiber OPGW. This project includes a  
23 rebuild of the 9205 line between Eldorado Substation and the “National  
24 Center for Atmospheric Research (“NCAR”) Tap Structure,” rebuild of  
25 the 9205 line between the “NCAR Tap Structure” and the NCAR  
26 Substation, replacement of five structures for “Line Capacity,” and  
27 replacement of three additional structures that are at the end of their  
28 useful life. The Company plans to place in service \$11.7 million  
attributable to this rebuild from September 1, 2019 through 2022.

- 29
- 30 • *Public Service Transmission Relocation Program:* Asset Renewal  
31 projects also include relocations required by road construction projects.  
32 The Company works with federal, state, and local highway road  
33 departments to identify needed relocations. The Company plans to  
34 place in service \$6.9 million attributable to Relocation from September  
1, 2019 through 2022.

- 35
- 36 • *Transmission UAV Flights:* In 2019, the Company started using  
37 Unmanned Aerial Vehicles (“UAV”) (drones) to inspect our transmission  
38 facilities. In 2020, we inspected over 2,400 miles of line on the Public  
39 Service Transmission System. The Company plans to place in service  
40 \$6.2 million attributable to UAV Flights from September 1, 2019 through  
2022.

1 Q. IS IT YOUR CONCLUSION THAT THE ASSET RENEWAL PROJECT CAPITAL  
2 ADDITIONS OVER THIS PERIOD FOR WHICH THE COMPANY IS SEEKING  
3 RECOVERY IN THIS PROCEEDING HAVE BEEN REASONABLY AND  
4 PRUDENTLY INCURRED?

5 A. Yes.

6 B. Reliability Requirements

7 Q. PLEASE DISCUSS THE PRIMARY DRIVERS OF PUBLIC SERVICE'S  
8 TRANSMISSION CAPITAL ADDITIONS RELATED TO RELIABILITY  
9 REQUIREMENTS FROM SEPTEMBER 1, 2019 THROUGH DECEMBER 31,  
10 2022.

11 A. Total capital additions for Reliability Requirements projects during this timeframe  
12 are \$104.9 million. Illustrative examples of projects related to Reliability  
13 Requirements during this period include:

14 • *Steamboat Springs Transformer Replacements*: The scope of this  
15 project includes replacing/upgrading existing (2) 50 Megavolt-ampere  
16 ("MVA") transformers with 120 MVA transformers to support current and  
17 future load requirements (mainly Yampa Valley Electric) and system  
18 reliability. Project was initiated in December 2018. The Company will  
19 have placed \$14.3 million for this project in service from September 1,  
20 2019 through 2022.

21 • *Distribution Capacity Planning ("DCP") Timnath*: This is a multi-year  
22 project, with portions of the project placed in-service as they are put to  
23 use each year. The projected capital additions for this project in 2022  
24 are \$10.9 million. The original project work orders refer to this project  
25 as DCP Timnath because it is a new distribution substation near  
26 Timnath, Colorado. As the project developed, it became known as the  
27 Avery Substation Project. The project consists of building a new Avery  
28 Substation in Weld County approximately three miles south of the Platte  
29 River Power Authority Ault – Timberline 230 kV line. The new Avery  
30 substation will tap the Ault – Timberline 230 kV transmission line using  
31 230 kV double-circuit transmission and an in-and-out termination

1 configuration. The substation will include a three-breaker ring design  
2 and a single 230/13.8 kV, 28 MVA transformer but built to accommodate  
3 two 230/13.8 kV, 28 MVA transformers for future load growth. This  
4 project is needed to serve new load growth and development in the  
5 Timnath area. A CPCN was granted for this project by Decision No.  
6 C15-0461 in Proceeding No. 15A-0159E.

- 7
- 8 • DCP High Point #1: The DCP High Point project is projected to cost  
9 \$10.8 million for its transmission component. This project is necessary  
10 to accommodate several large residential and commercial  
11 developments being planned between Pena Boulevard and Powhatan  
12 Road, which include the following: Pena Station, High Point, Painted  
13 Prairie, Harvest Mile, Porteos, Aurora Highlands, and others. Situated  
14 on over 7,500 acres, these developments will include approximately 24  
15 million square feet of commercial space, 5,000 hotel rooms, and 22,000  
16 residential dwelling units for a projected load of over 100 MVA. The  
17 project consists of the High Point Distribution 230/13.8 kV, 50 MVA  
18 Substation Project, which includes approximately 3.5 miles of new 230  
19 kV double-circuit transmission line that will tap into the existing 5277  
20 Spruce-Green Valley 230 kV transmission line. The Company applied  
21 for a CPCN for this project in Proceeding No. 20A-0082E, and the  
22 Commission granted the CPCN by Decision No. R20-0725 (exceptions  
23 denied in Decision No. C20-0886). The DCP High Point project's  
24 transmission component was projected to cost \$10.7 million as  
25 presented in the CPCN proceeding, and Decision No. R20-0725  
26 approved the CPCN with an eight percent contingency for the project's  
27 costs. Decision No. R20-0725 also directed Public Service "to  
28 specifically identify the actual costs for the Project, individually and in  
29 total, in at least as much detail as provided in this proceeding."<sup>4</sup> I  
30 discuss this requirement later in this Section, and Company witness Ms.  
31 Betty L. Mirzayi discusses the DCP High Point project in more detail in  
her testimony.

- 32
- 33 • *Spill Prevention, Control, and Containment ("SPCC") Improvements:*  
34 The SPCC program is a multi-year program implemented by Xcel to  
35 comply with Federal environmental regulatory and Xcel Energy  
36 environmental policy requirements. A number of substations have been  
37 identified that need capital improvements to construct new secondary  
38 containments around oil filled electrical equipment to prevent an oil spill  
39 from reaching the waters of the United States. The Company will have  
40 placed \$10.4 million for this project in service from September 1, 2019  
through 2022.

---

<sup>4</sup> Proceeding No. 20A-0082E, Decision No. R20-0725, ¶ 71 (mailed Oct. 12, 2020).

- 1
- 2
- 3
- 4
- 5
- *Pawnee – Daniels Park Reconductor*: The scope of work for this project includes rebuilding/reconducting of approximately 66 miles of total line on Circuit 5457 (Pawnee-Missile Site) and Circuit 5113 (Missile Site-Daniels Park), which are single circuit 230 kV lines. Capital additions from September 1, 2019 through 2022 will be \$9.5 million.
- 6
- 7
- 8
- 9
- *Transmission Upgrades — all FAC-008 Facility Ratings Projects*: These projects consist of work required to comply with NERC Reliability Standards FAC-008. The Company plans to place in service \$9.0 million from September 1, 2019 through 2022.
- 10
- 11
- 12
- 13
- 14
- 15
- 16
- 17
- 18
- 19
- 20
- 21
- *Joint Facilities USA Agreement(s) (“JF-USA”)*: The JF-USA provides the foundation for assigning costs with respect to capital additions associated with facilities jointly owned by two or more Colorado utilities. One example is “FSVR 5313 Relay NS Sub” project, which will cost \$0.7 million to upgrade the existing line relaying on the 230kV line 5313 from Fort Saint Vrain to WAPA’s Ault Substation. The breaker failure relaying on breakers 5313 and 5308 will also be upgraded. The existing line protection on the line to WAPA utilizes a microwave circuit for pilot protection. Due to operational failure of the line protection equipment, WAPA has requested that Xcel upgrade the line protective relaying. The Company will have placed \$5.8 million for similar Joint Facility projects in service from September 1, 2019 through 2022.
- 22
- 23
- 24
- 25
- 26
- 27
- 28
- 29
- *Cherokee 115kV Bus Modification*: This project will consist of installing two new transmission lines between the Cherokee North and Cherokee South switchyards, one for each of the East & West 115kV buses. Each line will be equipped with a circuit breaker located at either end (i.e. in the North or South switchyard) in order to function as a Bus-Tie for its respective 115kV bus. Public Service will place \$5.1 million in capital additions for the Cherokee 115kV Bus Modification projects from September 1, 2019 through 2022.
- 30
- 31
- 32
- 33
- 34
- 35
- 36
- 37
- *DCP Dove Valley #1*: This project consists of adding a new distribution substation, including initial installation of a 230/13.8 kV, 50 MVA distribution transformer. The new substation will be located in the southern metropolitan area near the City of Lone Tree, Colorado and is needed to provide additional capacity for load growth and redundancy around the area. Public Service projects \$5.0 million in capital additions in 2022 for this project, all of which will be spent on Right of Way (“ROW”).

1 **Q. ARE THERE ANY PROJECTS LISTED ABOVE FOR WHICH THERE ARE**  
2 **ADDITIONAL REQUIRED SHOWINGS RESULTING FROM PRIOR**  
3 **REGULATORY DECISIONS THAT YOU WOULD LIKE TO DISCUSS?**

4 A. Yes. As I noted above, the Commission issued a CPCN for the DCP High Point  
5 #1 project in Proceeding No. 20A-0082E by Decision No. R20-0725, which  
6 directed Public Service “to specifically identify the actual costs for the Project,  
7 individually and in total, in at least as much detail as provided in this proceeding.”<sup>5</sup>  
8 Company witness Ms. Mirzayi provides the detailed project costs in Attachment  
9 BLM-4 to her Direct Testimony in this case. Attachment BLM-4 also includes a  
10 comparison of the final project costs with the costs presented in Proceeding No.  
11 20A-0082E.

12 **Q. PLEASE IDENTIFY THE AMOUNT OF THE CAPITAL ADDITIONS FROM**  
13 **SEPTEMBER 1, 2019 THROUGH 2022 FOR DCP HIGH POINT #1.**

14 A. In Proceeding No. 20A-0082E, Public Service provided the transmission cost  
15 component for the project broken out by facilities cost and land rights cost. The  
16 capital additions for these categories are \$8.0 million and \$2.8 million, respectively,  
17 over this time period. This yields a total project plant addition cost of \$10.8 million,  
18 which is \$100,000 over the point cost estimate presented in Proceeding No. 20A-  
19 0082E for the transmission component of the project. The total transmission  
20 component of the project cost is therefore within the eight percent contingency  
21 approved in Proceeding No. 20A-0082E.

---

<sup>5</sup> Proceeding No. 20A-0082E, Decision No. R20-0725, ¶ 71 (mailed Oct. 12, 2020).

1 **Q. IS IT YOUR CONCLUSION THAT THE TRANSMISSION COSTS ASSOCIATED**  
2 **WITH THE HIGH POINT PROJECT ARE REASONABLE AND PRUDENT?**

3 A. Yes. The Company has managed within its forecasted budget presented in the  
4 CPCN proceeding and I conclude that the Transmission costs associated with this  
5 project are reasonable and prudent.

6 **C. Regional Expansion**

7 **Q. PLEASE DISCUSS THE PRIMARY DRIVERS OF TRANSMISSION CAPITAL**  
8 **ADDITIONS RELATED TO REGIONAL EXPANSION FROM SEPTEMBER 1,**  
9 **2019 THROUGH DECEMBER 31, 2022.**

10 A. Total capital additions for Regional Expansion projects for September 1, 2019 to  
11 December 31, 2022 are \$85.9 million. All of these capital additions relate to the  
12 Senate Bill 07-100 ("SB 07-100") Pawnee-Daniels Park project, a multi-year  
13 project consisting of new 345 kV transmission lines and substations between our  
14 Pawnee Substation near Brush, Colorado, and the Daniels Park Substation south  
15 of the Denver metro area. The 125-mile project is part of the Company's SB 07-  
16 100 portfolio of transmission plans and is a critical component of our long-range  
17 transmission plan. The project allows for the interconnection and delivery of new  
18 generation resources, including renewable energy, to Public Service customers to  
19 meet new load growth and improve system reliability. The Commission approved  
20 the Company's CPCN application for the project on April 9, 2015 in Proceeding  
21 No. 14A-0287E (Decision Nos. R14-1405 and C15-0316). The CPCN was granted  
22 on the condition that construction not begin until 2020, which corresponded to an  
23 in-service date of 2022. In late 2015, however, Congress extended the Production

1 Tax Credit (“PTC”) for new wind generation projects – with a declining recovery  
2 schedule for projects that start construction after 2016. As a result, Public Service  
3 filed a Petition for Variance (Proceeding No. 16V-0314E, later consolidated with  
4 Proceeding No. 16A-0117E) requesting that the Commission modify its previous  
5 decision and accelerate the in-service date to October 2019 and the construction  
6 start date to 2017 for the Smoky Hill to Daniels Park portion of the project, which  
7 includes the Harvest Mile substation. In September 2016, Public Service, along  
8 with multiple parties, agreed to a settlement that included moving the in-service  
9 date of the entire project to October 2019.<sup>6</sup> The settlement agreement was  
10 approved by the Commission on September 30, 2016. On October 20, 2016 the  
11 Commission issued its written approval in Decision No. C16-0958.

12 **Q. PLEASE PROVIDE MORE DETAIL ON THE PAWNEE-DANIELS PARK**  
13 **PROJECT COSTS.**

14 A. The Company placed \$85.9 million attributable to the Pawnee-Daniels Park Project  
15 in service between September 1, 2019 and December 31, 2022, which accounts  
16 for approximately 50 percent of all project construction (the remainder was placed  
17 in service prior to September 1, 2019). In its CPCN Application, the Company  
18 estimated the Pawnee-Daniels Park Project would cost \$178 million plus or minus  
19 30 percent (*i.e.*, between \$124.6 and \$231.4 million). In its Decision granting the  
20 Company a CPCN for Pawnee-Daniels Park, the Commission directed Public  
21 Service to file semi-annual compliance filings until the project is complete.<sup>7</sup> Among

---

<sup>6</sup> See Non-Unanimous Settlement Agreement (Sep. 2, 2016), consolidated Proceeding Nos. 16A-0117E, 16V-0314E, approved by Decision No. C16-0958 (mailed Oct. 20, 2016).

<sup>7</sup> Proceeding No. 14A-0287E, Decision No. R14-1405, ordering ¶ 7 (mailed Nov. 25, 2014).

1 other things, the Commission directed the Company to provide the monthly actual  
2 expenses incurred and monthly budgeted expenditures by activity, an explanation  
3 of any changes to the overall budget for the project, and efforts to reduce the cost  
4 of the project. The Company has complied with this requirement and since filed  
5 five semi-annual status reports. The Company filed its last status report on  
6 January 23, 2020, which is provided as Attachment CLP-3 to my Direct Testimony.  
7 As reflected in that report, the Company completed the Pawnee-Daniels Park  
8 project in late 2019, with the last segment energized on December 26, 2019. The  
9 total capital placed in service for the project was \$169.4 million (including the  
10 amounts placed in service before September 1, 2019), which was within five  
11 percent of the original project estimate.

12 **D. Interconnection**

13 **Q. PLEASE DISCUSS THE PRIMARY DRIVERS OF TRANSMISSION CAPITAL**  
14 **ADDITIONS RELATED TO INTERCONNECTION FROM SEPTEMBER 1, 2019**  
15 **THROUGH DECEMBER 31, 2022.**

16 **A.** Total net capital additions for Interconnection projects for September 1, 2019 to  
17 December 31, 2022, were \$36.5 million. Illustrative examples of projects related  
18 to Interconnection over this period include:

- 19
- 20 • *Colorado Energy Plan Portfolio Rush Creek II Switching Station:* The  
21 Shortgrass Switching Station (formerly known as the CEP Rush Creek  
22 II Switching Station) is located approximately 12 miles east of Hugo in  
23 Lincoln County, Colorado, and Public Service received a CPCN for this  
24 project by Decision No. C19-0175 in Proceeding No. 18A-0860E. The  
25 Shortgrass Switching Station is a 345 kV electrical hub that allows for  
26 interconnecting multiple transmission elements, such as transmission  
27 lines. Although the terms substation and switching station are often  
used interchangeably, a switching station differs from a substation in that

1 there are no transformers and the equipment operates at a single  
2 voltage level. The Shortgrass Switching Station includes 345 kV circuit  
3 breakers, switches, relays, communications equipment, and an  
4 equipment enclosure. This project represents \$27.2 million in capital  
5 additions between September 1, 2019 and December 31, 2022, but the  
6 Company is only seeking recovery in this rate case of the \$22.4 million  
7 in capital additions for the switching station itself, which is attributable to  
8 the CPCN received in Proceeding No. 18A-0860E. The remaining \$4.8  
9 million of the total costs for the Shortgrass Switching Station is for  
10 voltage control reactors, and attributable to the projects approved for a  
11 CPCN in Proceeding No. 19A-0728E. The Company is not seeking  
12 base rate recovery of these voltage control costs in this proceeding  
13 because the entire voltage control project will not be in service until  
14 2023, and Public Service will not seek recovery until the entire project is  
15 in service, as I discuss in more detail below.<sup>8</sup>  
16

17 In Proceeding No. 18A-0860E, the Company estimated the switching  
18 station would cost \$13.9 million in capital expenditures +/- 30 percent.  
19 Cost variances from the CPCN proceeding were driven by scope  
20 additions discovered during detailed engineering, which took place after  
21 the CPCN filing. The largest scope change was a permit requirement  
22 where Lincoln County required Public Service to maintain an 11-mile  
23 stretch of dirt road (approximately \$4 million). Additional scope costs  
24 contributing to the variance also included costs to upgrade remote  
25 substations, transmission lines, civil construction, and communications  
26 equipment that were not part of the original scope. Variances are also  
27 driven by the fact that the CPCN presented figures in terms of capital  
28 expenditures; Company witness Ms. Laurie Wold discusses the  
29 difference between a capital expenditure and capital addition in her  
30 Direct Testimony.

- 31
- 32 • *GI 2013 4 US DOE NREL NWTC Project:* The key project related to  
33 Interconnection in 2019 is the National Renewable Energy Laboratory  
34 (“NREL”) substation project, which will enable NREL’s National Wind  
35 Technology Center (“NWTC”) to interconnect to Public Service’s  
36 transmission system via a new customer-owned 115 kV transmission  
37 line. This project represents \$11.3 million in capital additions between  
September 1, 2019 and December 31, 2022. This project is in the

---

<sup>8</sup> Proceeding No. 19A-0728E, Decision No. C20-0648, ordering ¶ 2 (mailed Sept. 10, 2020) (ordering “Public Service in its next base rate case filing following the date that all facilities associated with the Voltage Control and GDT CPCNs are in service, to specifically identify the actual costs for the Voltage Control and GDT projects, individually and in total, in at least as much detail as provided in this proceeding”).

1 ordinary course of business, and the Commission has determined a  
2 CPCN is not required.<sup>9</sup>

3 **Q. YOU MENTIONED THAT THE COMPANY REMOVED COSTS ASSOCIATED**  
4 **WITH THE VOLTAGE CONTROL FACILITIES INCLUDED IN CPCN**  
5 **PROCEEDING NO. 19A-0728E FROM ITS REQUESTED RECOVERY IN THIS**  
6 **PROCEEDING. ARE THERE ANY OTHER PROJECTS PUBLIC SERVICE HAS**  
7 **REMOVED FROM ITS COST OF SERVICE?**

8 A. Yes. In addition to the voltage control facilities approved in Proceeding No. 19A-  
9 0728E, Public Service also removed costs associated with the Greenwood-Denver  
10 Terminal Transmission Line approved in 20A-0063E. These two proceedings were  
11 consolidated, where all projects/facilities were evaluated on a portfolio basis. The  
12 Company is not forecasting the entire portfolio will be in service prior to 2022.  
13 Therefore, Public Service will seek base rate recovery of these costs as part of a  
14 future proceeding. Public Service has also removed from its cost of service the  
15 remaining network upgrades and interconnection facilities needed to implement  
16 the 2016 Electric Resource Plan, including those identified in the Company's  
17 recently-filed CPCN in Proceeding No. 21A-0298E, since final CPCNs have not  
18 been issued.

---

<sup>9</sup> Proceeding No. 17M-0005E, Decision No. C17-0539, ordering ¶ 4 (mailed June 30, 2017).

1        **E.     Physical Security and Resiliency**

2        **Q.     PLEASE DISCUSS THE PRIMARY DRIVERS OF TRANSMISSION CAPITAL**  
3        **ADDITIONS RELATED TO PHYSICAL SECURITY AND RESILIENCY FROM**  
4        **SEPTEMBER 1, 2019 THROUGH DECEMBER 31, 2022.**

5        A.     Total capital additions for Physical Security and Resiliency projects for September  
6        1, 2019 to December 31, 2022, were \$36.1 million.    Transmission is focused on  
7        maintaining the physical security of our assets. High voltage transformers make  
8        up less than three percent of transformers in U.S. electric power substations, but  
9        they carry 60 to 70 percent of the nation’s electricity. Because they serve as vital  
10       nodes and carry bulk volumes of electricity, these transformers are critical  
11       elements of the nation’s electric power grid. They are also the most vulnerable to  
12       intentional damage from malicious acts. In April 2013, a substation in California  
13       was subject to a coordinated military-type sniper attack that disabled high voltage  
14       transformers and rendered this substation useless. Federal regulatory agencies  
15       have responded to these growing threats by adopting physical security standards  
16       for transmission facilities. On March 7, 2014, FERC issued an Order on Reliability  
17       Standards for Physical Security Measures, resulting in NERC standard CIP-0147  
18       addressing risks due to physical security threats and vulnerabilities. To address  
19       these threats and meet these new NERC standards, we are making necessary  
20       investments to make our grid more resilient so that we can respond quickly to  
21       physical security threats.

1 **Q. PLEASE IDENTIFY ILLUSTRATIVE EXAMPLES OF PHYSICAL SECURITY**  
2 **AND RESILIENCY PROJECTS OVER THE PERIOD SEPTEMBER 1, 2019**  
3 **THROUGH 2022 FOR WHICH THE COMPANY REQUESTS RECOVERY.**

4 A. Two illustrative projects fall into the 80 percent categorization:

5 • *Public Service Physical Security:* As an example, the Company  
6 identified four substations as needing both security cameras and  
7 physical infrastructure upgrades which include upgrading the substation  
8 fence, installation of lighting, camera installation, and significant security  
9 related improvements around the Electrical Equipment Enclosure  
10 ("EEE"). These specific capital additions are projected to cost \$9.7  
11 million. The total capital additions placed in service for September 1,  
12 2019 through 2022 are \$22.5 million.

13 • *Public Service Operational Technology ("OT") Cyber Security:* Install a  
14 Real-time Automation Controller ("RTAC") at the Boone Substation. The  
15 scope of this project is to increase visibility into substation network  
16 environments with the addition of a SEL-3555 RTAC. Each EEE at a  
17 site will have a RTAC installed. The RTAC will be connected to the  
18 substation network behind the firewall as well as a SEL-2407 clock  
19 device and other devices as determined for each site. The total capital  
20 additions to be placed in service for September 1, 2019 through 2022  
21 are \$6.5 million.

22  
23 **F. Communication Infrastructure**

24 **Q. PLEASE DISCUSS THE PRIMARY DRIVERS OF TRANSMISSION CAPITAL**  
25 **ADDITIONS RELATED TO COMMUNICATION INFRASTRUCTURE FROM**  
26 **SEPTEMBER 1, 2019 THROUGH DECEMBER 31, 2022.**

27 A. Total net capital additions for Communication Infrastructure projects for September  
28 1, 2019 to December 31, 2022, are \$9.7 million. The Communication Network  
29 program aims to privatize Xcel Energy's communication network infrastructure  
30 across the Public Service territory, wherever possible, at all transmission and  
31 distribution substations for SCADA, teleprotection, and remote engineering

1 access. Specifically, the program addresses aging analog circuit technology and  
2 other technology that is anticipated to become obsolete within five years. The  
3 Company will then build secure communication architecture for OT and information  
4 technology (“IT”) networks physically isolated from each other to support islanding  
5 of the energy management system (“EMS”) for further cyber security resilience.  
6 The program will enable the Company to reduce dependency on third-party circuit  
7 providers, which will improve the Company’s troubleshooting response time and  
8 reduce circuit down time. As a result, we need to invest in Company-owned and  
9 controlled communication infrastructure in OPGW that will serve our operational  
10 and system protection needs without the reliance and vulnerability exposure from  
11 a publicly available third-party network. Similarly, cyberattacks pose a threat to  
12 the reliability of our transmission system as hackers could cause system outages  
13 by disabling telecommunications or key pieces of equipment.

14 **Q. WHAT DO YOU CONCLUDE REGARDING THE TOTAL CAPITAL ADDITIONS**  
15 **FOR THE TRANSMISSION BUSINESS AREA CAPITAL PROJECTS THAT**  
16 **WENT INTO SERVICE OR ARE PROJECTED TO GO INTO SERVICE FROM**  
17 **SEPTEMBER 1, 2019 TO DECEMBER 31, 2022?**

18 A. I conclude that these capital additions have been prudently incurred, are  
19 reasonable in cost, and used and useful in support of Public Service’s ability to  
20 provide safe and reliable electric service to its customers. The projects placed in  
21 service during this time period were necessary to renew Public Service’s  
22 transmission system assets as they require replacing from routine aging and  
23 damage, to ensure continued reliability on Public Service’s transmission system,

1 and to develop the Pawnee-Daniels Park project for delivering power from new  
2 generation resources to the Company's customers. Additionally, the capital  
3 additions for the projects discussed in this section were needed to interconnect  
4 new generation resources, maintain the security and resiliency of the Company's  
5 transmission system, and maintain and upgrade the Company's transmission  
6 communication infrastructure.

1 **V. TRANSMISSION O&M**

2 **Q. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR DIRECT TESTIMONY?**

3 A. The purpose of this section of my Direct Testimony is to provide an overview of the  
4 Transmission Business Area's O&M expenses during the proposed test year  
5 period, followed by a discussion of the actual 2020 Transmission Business Area  
6 O&M expenses, and proposed adjustments for transmission wheeling services,  
7 which the Company proposes to use as the primary basis for establishing  
8 Transmission O&M levels included in the 2022 FTY. I also describe the drivers of  
9 O&M increases between 2018, the last test year upon which current base rates  
10 are set, and 2022, where applicable.

11 **Q. FOR BACKGROUND, DOES THE COMPANY RECOVER TRANSMISSION**  
12 **O&M EXPENSES THROUGH THE TCA?**

13 A. No. The TCA is only used for recovery of capital expenses for transmission  
14 projects. O&M expenses are recovered through base rates.

15 **Q. WHAT ARE THE TYPES OF COSTS THAT THE TRANSMISSION BUSINESS**  
16 **AREA INCURS FOR O&M?**

17 A. I describe above the various work that is performed by the Transmission Business  
18 Area. To perform this work, the Transmission Business Area generally incurs O&M  
19 expenses each year in the following six categories:

- 20
- 21 • *Internal Labor:* Costs related to the O&M portion of salaries, straight  
22 time labor, overtime, premium time, and employee expenses for internal  
employees.
  - 23 • *Contract Labor and Consulting:* Costs related to the use of contract  
24 labor and consultants, which allows Public Service to increase and

1 decrease staffing levels as workloads require rather than adding more  
2 full-time staff, and to retain the services of experts as needed for specific  
3 tasks or project efforts.

4 • *Fees:* Fees the Company is required to pay include regulatory fees,  
5 license fees and permits related to railroads and land, environmental  
6 fees, and professional association dues that are necessary for the  
7 operation of our business.

8 • *Materials:* Costs related to consumables, hardware, and refurbished  
9 materials used in substation maintenance and repair operations, as well  
10 as tools, small equipment, and supporting supplies.

11 • *Fleet:* Costs for the internal fleet assets as directed to O&M accounts  
12 on an hourly basis including cars, trucks, construction equipment, and  
13 trailers.

14 • *Other:* Includes miscellaneous other costs such as use costs,  
15 maintenance costs, employee expenses, rents, network communication  
16 costs and office supplies.

17 **Q. WHAT WERE TRANSMISSION'S ACTUAL 2020 O&M COSTS?**

18 A. Our actual O&M expenses for 2020 totaled \$27.4 million. Table CLP-D-2 below  
19 breaks down the amount of overall O&M costs by the categories I discussed  
20 above. Attachments CLP-4 and CLP-5 provide an accounting of these expenses  
21 by Cost Element and FERC account, respectively.

1  
2  
3  
4

**TABLE CLP-D-2:  
Transmission 2020 Actual O&M Expenses\*  
Public Service Electric  
(Dollars in Millions)**

<b>Cost Category</b>	<b>2020</b>
Internal Labor	\$16.2
Contract Labor and Consulting	\$4.5
Fees	\$3.1
Materials	\$1.4
Fleet	\$0.9
Other	\$1.2
<b>Total</b>	<b>\$27.4</b>
<i>*There may be differences between the sum of the individual category amounts and totals due to rounding.</i>	

5 **Q. WHAT ARE THE DRIVERS BETWEEN TRANSMISSION’S 2018 O&M COSTS**  
6 **USED IN THE 2019 ELECTRIC PHASE I AND THE 2020 O&M COSTS THAT**  
7 **WILL BE REFLECTED IN THE 2022 FTY?**

8 **A.** The drivers are shown in Table CLP-D-3 below.

1 **TABLE CLP-D-3:**  
2 **Drivers of Transmission O&M Expenses from 2018 Historical Test Year (“HTY”)**  
3 **to 2020 Actuals\***  
4 **Public Service Electric**  
5 **(Dollars in Millions)**

Driver	2018 HTY	Driver Amount	2020 Actual
Internal Labor	\$18.6	\$(2.4)	\$16.2
Contract Labor and Consulting	\$4.3	\$0.2	\$4.5
Fees	\$3.8	\$(0.7)	\$3.1
Materials	\$2.3	\$(0.9)	\$1.4
Fleet	\$1.9	\$(1.0)	\$0.9
Other	\$1.9	\$(0.7)	\$1.2
<b>Total Electric</b>	<b>\$32.7</b>	<b>\$(5.3)</b>	<b>\$27.4</b>
<i>*There may be differences between the sum of the individual category amounts and totals due to rounding.</i>			

6 **Q. CAN YOU PROVIDE MORE INFORMATION REGARDING THE MAIN DRIVERS**  
7 **SHOWN IN TABLE CLP-D-3?**

8 A. As shown in Table CLP-D-3, changes in O&M expenses primarily fell within the  
9 Internal Labor, Fees, Materials, Fleet, and Other categories. I discuss the main  
10 drivers for each of these O&M categories below.

- 11 • *Internal Labor:* Public Service experienced a decrease of \$2.4 million  
12 primarily due to repurposing crews to capital projects for which the crews  
13 direct charge their labor to specific projects. The percentage of labor  
14 charged to O&M decreased from 2018 to 2020, as more base labor was  
15 charged to capital. Additionally, Public Service adopted continuous  
16 improvement efforts in 2019 which has led to lower O&M expense.
- 17 • *Fees:* Public Service experienced a \$0.7 million decrease in fees, which  
18 was primarily driven by switching reliability coordinators (from Peak  
19 Reliability to Southwest Power Pool Reliability).
- 20 • *Materials:* Public Service experienced a \$0.9 million decrease in  
21 materials, which was driven by enhanced scrutiny and application of the  
22 Company’s repair versus replace model. Historically, equipment would  
23

1 be repaired if needed. The Company has improved usage of its model  
2 to determine whether it is more cost efficient to repair or replace a given  
3 unit. As the system ages, more equipment will be replaced instead of  
4 repaired.

5 • *Fleet:* Public Service experienced a \$1.0 million decrease, which was  
6 driven by a concerted effort to assign fleet costs to work being  
7 performed, and the work primarily has been capital.

8 • *Contract Services:* Public Service experienced a \$0.2 million increase in  
9 contract services, which is not a material change compared to previous  
10 years.

11 • *Other:* Public Service experienced a \$0.7 million decrease primarily due  
12 to an overall decrease in employee expenses due to COVID-19  
13 (\$653,000 reduction period over period for total employee expenses).  
14 Primary drivers for employee expense reductions were reduced costs  
15 related to travel (airfare, car rentals, hotels, meals, and conference  
16 seminars). Travel-related employee expenses decreased 61 percent  
17 period over period.

18 **Q. DO THESE COSTS CONTAIN ANY WILDFIRE MITIGATION O&M COSTS?**

19 A. No. Company witness Ms. Johnson sponsors and discusses all O&M costs  
20 (transmission and distribution) associated with the Company's wildfire mitigation  
21 efforts.

22 **Q. ARE THE \$27.4 MILLION IN 2020 O&M EXPENSE THAT YOU DESCRIBE IN**  
23 **TABLE CLP-D-3 ABOVE REFLECTED IN THE COMPANY'S 2022 FTY COST**  
24 **OF SERVICE PRESENTED BY MS. BLAIR?**

25 A. Yes, it is used as the representative level of Transmission O&M for the 2022 FTY.  
26 As reflected in Attachments CLP-4 and CLP-5, the Company is seeking \$27.4  
27 million for Transmission O&M.

1 **Q. ARE YOU PROPOSING ANY ADJUSTMENTS TO THE COMPANY'S 2020 O&M**  
2 **EXPENSES TO BE REFLECTED IN THE FTY FOR TRANSMISSION O&M**  
3 **EXPENSES?**

4 A. Yes. Public Service is proposing an FTY adjustment for wheeling costs, which I  
5 discuss in Section VI below.

6 **Q. ARE THESE O&M EXPENSES REASONABLE AND NECESSARY TO CARRY**  
7 **OUT THE TRANSMISSION BUSINESS AREA'S KEY FUNCTIONS YOU**  
8 **DESCRIBED ABOVE?**

9 A. Yes. These O&M expenses are necessary to ensure that the Transmission  
10 Business Area is able to deliver safe and reliable electric service to our Colorado  
11 customers.

12 **Q. IS THE COMPANY'S 2020 TRANSMISSION O&M A REASONABLE BASIS ON**  
13 **WHICH TO ESTABLISH TRANSMISSION'S O&M COSTS FOR THE 2022 FTY?**

14 A. Yes. The Company's 2020 Transmission O&M costs are reasonably  
15 representative of the Company's forecasted O&M costs.

1                   **VI.           TRANSMISSION WHEELING SERVICES COSTS**

2   **Q.       WHAT IS THE PURPOSE OF THIS SECTION OF YOUR DIRECT TESTIMONY?**

3   A.       In this section of my Direct Testimony, I describe Public Service's use of third-party  
4           wheeling service to transmit power to serve its customers as well as the costs for  
5           these services. My Direct Testimony provides support for the FTY adjustments for  
6           Transmission Wheeling Services included in the 2022 FTY cost of service study  
7           sponsored by Ms. Blair.

8   **Q.       ARE WHEELING COSTS PART OF THE TRANSMISSION AREA'S CAPITAL  
9           AND O&M BUDGETS?**

10 A.       No. These costs are not part of the capital and O&M budgets I describe above.  
11           These costs are incurred by our Commercial Operations area to provide  
12           transmission access to serve our retail customers and provide transmission  
13           service to import power into the Public Service system.

14 **Q.       WHAT IS WHEELING SERVICE?**

15 A.       Wheeling is an industry term used to describe the transmission of electricity by an  
16           entity that does not own or directly use the electricity that it is transmitting. When  
17           a public utility requires use of the transmission or distribution assets of another  
18           system in order to deliver electricity to its electric customers, it is required to pay a  
19           wheeling charge. In the context of my Direct Testimony, I use the term wheeling  
20           to describe the arrangements that Public Service has entered into with its  
21           neighboring utilities to utilize their transmission and/or distribution systems to serve  
22           Public Service customers in a cost-effective way.

1 **Q. WHY DO UTILITIES ENGAGE IN TRANSMISSION WHEELING?**

2 A. Because the electric grid is an interconnected network, utilities often find that it is  
3 more cost effective to purchase transmission service from others to serve their  
4 electric customers rather than to construct new facilities. Generally, utilities will  
5 utilize wheeling when it is less expensive to purchase wheeling service or where  
6 the construction of new facilities is impractical. Utilities may also purchase  
7 wheeling service from others to serve customers during outage conditions.

8 **Q. DO UTILITIES PURCHASE TRANSMISSION SERVICE FOR REASONS OTHER**  
9 **THAN SERVING THEIR ELECTRIC CUSTOMERS?**

10 A. Yes. In addition to wheeling energy to serve customers, utilities also purchase  
11 wheeling service from others to import generation or to access generation markets.  
12 For example, a utility (or developer) may purchase transmission service to import  
13 generation from a new wind farm or other generator if the generation resource is  
14 not directly interconnected to the utility's core transmission network. A utility may  
15 also purchase Point-to-Point ("PTP") transmission service to access market hubs  
16 outside of its geographic network so that it may have access to those hubs rather  
17 than construct its own native generation. For the purposes of my Direct Testimony,  
18 I include these generation-related uses of third-party transmission service when I  
19 use the term wheeling.

20 **Q. DOES PUBLIC SERVICE PURCHASE WHEELING SERVICE?**

21 A. Much like other electric utilities, Public Service engages in a number of wheeling  
22 transactions to both serve its retail native load, as well as to provide transmission  
23 paths into Public Service's network for its generation and market access. In each

1 case, Public Service's use of wheeling service avoids the need to construct  
2 duplicative assets that would either be costlier than purchasing wheeling service  
3 or are impractical to build or acquire.

4 **Q. WHAT ARE THE WHEELING TRANSACTIONS IN WHICH PUBLIC SERVICE**  
5 **ENGAGES?**

6 A. Attachment CLP-6 identifies Public Service's wheeling transactions for which  
7 recovery is being requested in base rates, along with a description of each  
8 transaction. As reflected in Attachment CLP-6, the Company is seeking to recover  
9 \$21.9 million in wheeling expense.

10 **Q. HAVE WHEELING COSTS INCREASED SINCE 2018?**

11 A. Yes. Public Service's 2020 wheeling costs, not including adjustments, were  
12 approximately \$8.8 million higher than the wheeling costs included in the 2019  
13 Electric Phase I that used calendar 2018 level of expense.

14 **Q. WHAT DROVE THIS INCREASE IN COSTS FROM 2018 TO 2020?**

15 A. Changes in wheeling costs from 2018 to 2020 were primarily driven by the  
16 following:

17 • *Public Service – Four Corners-Craig 188 MW PTP:* The 188 MW Point-  
18 to-Point reservation has allowed Public Service to lower the reserves it  
19 carries with its own resources, which lower the Company's production  
20 costs. The cost of the reservation has increased by approximately \$2  
21 million as a result of an increase in the Public Service firm PTP  
22 transmission rate.

23 • *Point-to-Point Purchases:* As a result of elevated system conditions  
24 during 2020, \$5.9 million of PTP transmission service was procured on  
25 other transmission systems. The costs of the reservations when  
26 combined with the associated energy purchased are recovered through  
27 the Electric Commodity Adjustment ("ECA") as described below.

1 **Q. IS PUBLIC SERVICE UTILIZING 2020 ACTUAL WHEELING COSTS TO**  
2 **ESTABLISH ITS COST OF SERVICE IN THIS PROCEEDING?**

3 A. Yes, as Ms. Blair discusses, the 2022 FTY cost of service starts with 2020 actual  
4 O&M costs, but the level of wheeling expenses requested in this rate case has  
5 been adjusted for known FTY adjustments.

6 **Q. DOES ATTACHMENT CLP-6 INCLUDE ALL WHEELING COST**  
7 **ADJUSTMENTS INCLUDED IN THE 2022 FTY?**

8 A. No. In addition to the FTY adjustments to 2020 costs I discuss below, Public  
9 Service has excluded certain wheeling costs collected through the ECA.

10 **Q. WHAT FTY ADJUSTMENTS TO THE COST OF WHEELING SERVICES IS**  
11 **PUBLIC SERVICE PROPOSING TO MAKE?**

12 A. Public Service has proposed four types of FTY adjustments: (1) Economic  
13 Purchases, (2) Trading Activity, (3) Sales for Resale, and (4) Prior-Year True-Ups.

14 Economic purchases refers to the procurement of point to point  
15 transmission service on other transmission systems due to elevated system  
16 conditions; to the extent these costs, when combined with the associated energy  
17 purchase, are deemed economic, they are recovered through the ECA.  
18 Accordingly, wheeling expenses were adjusted by \$3,039,304 to exclude such  
19 costs incurred in 2020.

20 Trading Activity refers to wheeling charges associated with proprietary  
21 and/or off-system trading activity (which are included in the calculation of trading  
22 margins and shared with customers through the ECA); therefore, an adjustment of  
23 \$929,956 is necessary to exclude these amounts from wheeling expense.

1           Sales for resale refers to PTP transmission service that is procured from  
2           Tri-State in order to serve a wholesale customer, and approximately \$367,000 of  
3           associated wheeling expense has been excluded.

4           Prior-period true-ups includes an adjustment of \$1,171,609 to exclude  
5           accounting adjustments recorded in 2020 related to the true-up of Public Service's  
6           2018 and 2019 Transmission Integration and Equalization Agreement with Holy  
7           Cross Electric Association, Inc.

8           In total, Public Service proposes a net decrease of \$3,280,125 to the  
9           Company's 2020 actual Transmission O&M levels to account for its adjustments,  
10          which is reflected in the column "2022 Adjusted" in the table included on page 2 of  
11          Attachment CLP-6.

1           **VII. TRANSMISSION CAPACITY RESERVATION DEFERRAL**

2   **Q.   WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?**

3   A.   In this section of my Direct Testimony, I discuss the background and costs  
4       associated with the Company's request to defer costs associated with certain  
5       summer Transmission capacity reservations the Company plans to make for the  
6       next five years.

7   **Q.   PLEASE SUMMARIZE THE TRANSMISSION CAPACITY DEFERRAL PUBLIC  
8       SERVICE IS REQUESTING.**

9   A.   Over the past two summer periods, Public Service has been able to reserve  
10       various amounts of firm transmission service on a monthly basis, primarily from  
11       WAPA. However, beginning late last year other parties purchased this  
12       transmission service for summer 2021, and there are two long-term requests being  
13       analyzed by WAPA for long-term (five-year) service.

14   **Q.   WHY DOES PUBLIC SERVICE NEED ADDITIONAL FIRM TRANSMISSION  
15       IMPORT CAPABILITY?**

16   A.   During peak demand periods in the summer, additional transmission capacity is  
17       necessary for times when Public Service needs additional resources to serve load.  
18       This can occur on days with light winds (and therefore low wind generation output)  
19       or if one of Public Service's thermal generation facilities experiences an outage.  
20       Public Service has only minor (60 MW) transfer rights across the TOT<sup>10</sup> 3 path

---

<sup>10</sup> The term "TOT" is a carry-over term from when power flow computer models only permitted three letters. TOT stands for "total" and signifies the total transmission capacity attributable to several transmission lines running in parallel.

1 which consists of the transmission lines between Wyoming/Nebraska and  
2 Colorado. Additionally, these rights are held as Transmission Reliability Margin  
3 for an operating reserve activation from the Northwest Power Pool  
4 (“NWPP”). Public Service is usually able to obtain energy and capacity resources  
5 on the north side of this path during constrained periods, but with limited  
6 transmission capacity is reliant upon non-firm transmission being available in real  
7 time. Furthermore, having access to additional firm transmission service across  
8 TOT 3 would increase the capability to rely on the NWPP when an activation due  
9 to a Public Service generator outage is required.

10 **Q. WHAT ARE THE COSTS PUBLIC SERVICE IS SEEKING TO DEFER?**

11 A. To make a long-term reservation of firm point-to-point service, the customer is  
12 required to pre-pay one month of service. For a 110 MW reservation at WAPA’s  
13 current rates, this amounts to \$475,733. In addition, Public Service will need to  
14 pay a per-reservation application fee of \$3,500 (\$7,000 total) and study costs of  
15 approximately \$50,000 (\$100,000 total), for a grand total of \$582,733 to be paid in  
16 2022. Public Service will request 110 MW from various delivery points for five  
17 years of service starting June 1, 2023. Annual costs at WAPA’s current rates  
18 would be approximately \$5.7 million, as reflected in Attachment CLP-7 to my Direct  
19 Testimony. Accordingly, Public Service is seeking Commission approval to track  
20 and defer the application fee, study, and reservation costs of approximately \$5.7  
21 million per year associated with these transmission reservations.

**VIII. RECOMMENDATIONS AND CONCLUSION**

2

**Q. PLEASE SUMMARIZE YOUR RECOMMENDATIONS.**

3

A. As part of approving the cost of service developed by Ms. Blair, I recommend that the Commission authorize base rate recovery of the September 1, 2019 through December 31, 2022 capital additions and 2020 O&M expense to be included in the 2022 FTY. I also recommend that the Commission authorize the FTY adjustments for Transmission Wheeling Services included in the Company's cost of service.

6

7

8

**Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

9

A. Yes, it does.

## **Statement of Qualifications**

### **Connie L. Paoletti**

Connie L. Paoletti is the Manager of Transmission Planning for Public Service Company of Colorado. In this position, Connie has responsibility for overseeing the engineering group responsible for planning the transmission system and is also responsible for the development of Transmission budgets, regulatory compliance and portions of the operations and maintenance (“O&M”) of Public Service’s transmission system. Since 2015, Connie has had responsibility for overseeing transmission policy and projects involving participation with other utilities, including conducting strategic analyses for potential transmission projects, evaluating and negotiating joint agreements, and engaging in stakeholder outreach. Connie served as the Public Service Transmission witness in the 2019 Phase I Electric Rate Case proceeding, the 2017 Phase I Electric Rate Case proceeding, and the 2016 Electric Resource Plan proceeding

Connie joined Xcel Energy in 2002. From early 2002 through the end of 2014, Connie was a Senior Originator in the Commercial Operations group. In that role, she worked on long-term structured transactions within the Midwest and West regions. From 1998 to 2001, Connie was employed by the Princeton Energy Programme as an instructor on energy risk management. Between 1986 and 1998, Connie was employed by Dow Chemical, Phillips Petroleum, and Reliant Energy in the Technical Sales, Trading and Origination roles.

Connie graduated from the Illinois Institute of Technology in 1986 with a Bachelor of Science degree in Chemical Engineering.
