## 1.0 Introduction

This Annual Coal Combustion Residuals (CCR) Fugitive Dust Control Report (Annual Report) has been prepared pursuant to the air criteria of 40 Code of Federal Regulations (CFR) Part 257.80(c). The Annual Report summarizes activities described in the CCR Fugitive Dust Control Plan (Plan) for Valmont Station and includes the following components:

- Description of actions taken to control CCR fugitive dust;
- A record of all citizen complaints; and
- A summary of any corrective measures taken.

This Annual Report addresses the period from October 15, 2021, to October 14, 2022. The Annual Report is deemed complete when it is placed in the facility's operating record. The initial Annual Report was completed December 14, 2016. Subsequent Annual Reports are due one year after the date of completing the previous annual report, which last year was completed December 13, 2021. The completion deadline for the current Annual Report is December 13, 2022.

The Annual Report will be placed in the operating record. The Annual Report will also be placed on the CCR Rule Compliance Data and Information public website described in Section 6.2.

## 2.0 Facility Description and Contact information

### 2.1 Facility General Information:

Valmont Station was a coal fired electric generating station that ceased operating in 2017 and with it the production of fly ash and bottom ash also ceased. The fly ash storage silo was emptied of CCR and removed from service in 2017 and is no longer a CCR fugitive dust source. The bottom ash impoundments ceased receiving non-CCR waste streams in 2018 and were closed by removal of all CCR in October 2018. Historically, bottom ash removed from the impoundments was disposed at the on-site CCR landfill. The landfill has been temporarily closed with an interim vegetated soil cap. The landfill received additional approved non-CCR waste (coal fines) in fourth quarter 2020 through first quarter of 2021 from clean-up of the former coal pile area, after which intermediate cover was placed on the landfill. During transport to and emplacement of coal fines from the former coal pile area to the CCR landfill, the active landfill was a potential CCR fugitive dust source but is no longer a source with intermediate cover placed in 2021. Non-CCR sources included fugitive emissions from the former coal pile area and unpaved roads.

The facility's Fugitive Dust Control Plan Revision 2 dated January 8, 2019, includes activities such as controlling vehicle speeds, watering of roads and work areas, observing changes in meteorological conditions, and following processes and procedures intended to minimize dust. The Plan is a formal statement of the activities and the methods specifically designed to minimize the creation of airborne dust, meeting all of the applicable requirements of the CCR Rule. A copy of the Plan can be found in the facility's operating record and on Xcel Energy's CCR Rule Compliance Data and Information public website.

Name of Facility: **Valmont Station**

Street: **1800 63rd St.**

City: **Boulder**

State: **CO**

ZIP Code: **80301**

County: **Boulder**

Latitude: **40.018889** Longitude: **-105.200833**

## 2.2 Facility's Contact Information:

Citizens can log fugitive dust complaints via the dedicated email account

([PSCoCCRIquiries@xcelenergy.com](mailto:PSCoCCRIquiries@xcelenergy.com))

## 3.0 Fugitive Dust Controls

Since closure of the bottom ash ponds in 2018, transport of non-CCR material (coal fines) in 2020/2021, and intermediate cover of the landfill, there has been no CCR handling at the facility. During the period of October 15, 2021, through October 14, 2022, fugitive dust control measures for non-CCR sources continued to be implemented pursuant to the facility's Title V permit, and fugitive dust emissions continued to be assessed at the landfill during the weekly CCR inspections.

The following table identifies potential fugitive dust generation areas, previous CCR handling operations (when historically active), and the preferred control measures to reduce dusting. Figure 1 illustrates these areas of the facility.

Plant Activity	Fugitive Dust Control Measures	Effectiveness
Plant Roadways	Watering and 15mph speed limit	Effective
Landfill	Temporarily closed with vegetated soil cap; weekly CCR inspections continue. In fourth quarter 2020/first quarter 2021 non-CCR waste was transported by trucks, compacted via wheeled roller watered as needed to control dusting, and a temporary cover installed. During active landfill operations, if high wind events (40 mph continuous wind or 55 mph wind gusts) occur the contractor will reduce or cease landfill operations, as needed. During the current reporting period, there were no handling of CCR or non-CCR waste at the landfill. The landfill has a vegetated soil cap for temporary closure.	Effective

## 4.0 Citizen Complaints

Citizens can log fugitive dust complaints via the dedicated email account ([PSCoCCRIquiries@xcelenergy.com](mailto:PSCoCCRIquiries@xcelenergy.com)) or via the Plant Environmental Analyst. Any citizen complaints of fugitive dust appearing to originate from the plant were to be investigated immediately. If any complaints are received, they are recorded in a log, including any follow-up or corrective actions that were taken.

### 4.1 Complaints

No citizen complaints were received and, therefore, no entries were made in the log.

### 4.2 Follow-up & Corrective Action and Documentation

No follow-up or corrective actions were necessary.

## 5.0 Plan Assessment & Effectiveness

The overall implementation and effectiveness of the Fugitive Dust Control Plan at the Valmont Station has been successful. All CCR controls were successfully applied as needed. No alterations were required for the previously identified controls. No new CCR controls were identified. The implemented controls are functioning effectively by controlling fugitive dust emissions.

## 6.0 Recordkeeping, Notification & Internet Requirements

### 6.1 Recordkeeping

This Fugitive Dust Control Plan will continue to be assessed annually unless a need is identified earlier during an inspection or upon analysis of a citizen complaint. The Plan will be updated if any new dust control measures are implemented at Valmont or a new CCR unit is constructed. Any citizen complaints will be logged, and appropriate corrective actions will be documented and implemented according to the Plan. For this Annual Report, the Valmont Facility map was revised to remove the haul routes since there were no active haul routes used during the reporting period.

### 6.2 Internet Site Requirements

The most recent Annual Report will be placed on the facility's CCR website titled "CCR Rule Compliance Data and Information" within 30 days of placing it in the operating record.
