

COMMERCIAL STREAMLINED ASSESSMENT

INFORMATION SHEET
COLORADO

IDENTIFY ENERGY-SAVING OPPORTUNITIES AND REDUCE OPERATING COSTS IN YOUR BUSINESS

Are you interested in learning about your current energy use trends and identifying ways you can save energy and lower monthly utility costs in your business? The Commercial Streamlined Assessment program can help.

An ASHRAE level 1 energy assessment is the first step. This service is available to commercial customers who receive electric and/or natural gas services from Xcel Energy. It is designed to help energy conscious businesses identify, plan, and budget for energy saving capital improvements.

The Commercial Streamlined Assessment program provides:

- An ASHRAE level 1 energy assessment of the major building systems equipment in your business; lighting, HVAC, water heating, commercial refrigeration, compressed air, and motors and drives.

The assessment can be performed through one of two ways:

1. **On-site** – Xcel Energy sends an appointed engineer to your business to assess the building systems.
 2. **Remote** – Using a smart phone, you would virtually walk an Xcel Energy appointed engineer through the business. With the help of a URL based, interactive platform, the engineer can easily guide you through the facility by directing you to appropriate building systems equipment.
- A post assessment energy report designed to help you better understand your energy use trends and energy saving equipment upgrade opportunities. The report includes:
 - A bill analysis of the past 3 years of billing data (where applicable) to show the energy consumption trends in the building year-over-year.
 - An end-use profile that shows the business' greatest energy uses by equipment and fuel type.
 - A list of low-cost electric and/or natural gas energy conservation opportunities and how quickly each improvement might pay for itself in energy savings.
 - Recommendations for energy conscious operational and maintenance adjustments.
 - Estimated rebates your project may be eligible to receive.
 - No-cost installation of instant energy saving measures including LED lamps, LED tubes, aerators, pre-rinse spray valves, and pipe insulation at the time of your audit, or through a follow-up appointment. Offer only available to Xcel Energy electric customers with an annual peak demand under 100kW.
 - Complimentary energy efficient equipment implementation services geared towards helping you prioritize and move forward with energy efficient capital improvements. Get help every step of the way! Services include:
 - Connecting you with participating contractors.
 - Reviewing bids to help you pick the best project that fits your needs while maximizing rebates.
 - Rebate paperwork and submission assistance.

Assessment Cost

BUILDING SIZE	COST*
<50,000 ft ²	Free
50,000 ft ² - 150,000 ft ²	\$250
>150,000 ft ²	\$500

*Assessment cost is subject to change. Contact a program representative to ensure pricing for your assessment
