

PROGRAM CHANGES ON THE WAY!

INFORMATION SHEET
COLORADO

Pending the public utilities commission approval of the filed 2021-2022 DSM plan, the Colorado Small Business Lighting and Commercial Refrigeration Efficiency programs will be retired and replaced by two new programs, Colorado Small Business Energy Solutions and Business HVAC+R Systems.

The intent of these new programs is to make it easier for customers to participate and provide more comprehensive solutions for our customers and trade partners.

Small Business Energy Solutions

The Small Business Energy Solutions program will expand on the support and services provided by the Small Business Lighting and Commercial Refrigeration Efficiency programs by offering customers support for all their business energy needs for lighting, heating, cooling, refrigeration and motors.

Qualifying customers will be eligible for a free assessment of the technology of their choosing, free installations of energy saving equipment, and support every step of the way, from connecting with a contractor to submitting rebate applications.

Business HVAC+R Systems

The Business HVAC+R Systems program combines Heating Efficiency, Cooling Efficiency, Motors, Drives and Pumps, and Refrigeration measures into an integrated offering for business customers. The Business HVAC+R offering focuses on customer's needs to drive deep energy savings and gives customers the opportunity to consider all high-efficiency energy options when choosing to replace existing mechanical systems.

The program will include a broad range of prescriptive rebates for HVAC equipment along with custom efficiency rebates for non-prescriptive energy-saving projects. Participation in the HVAC+R program will be through the online application only.

Small Business Lighting and Commercial Refrigeration Efficiency Projects in the Pipeline

If you have a Small Business Lighting or Commercial Refrigeration Efficiency project currently in progress, don't worry! Those projects are still eligible for rebates up to a year after the new Small Business Energy Solutions and HVAC+R programs launch. All invoices must be dated prior to the new program launch and submitted within a year of the invoice.
