3 **I. INTRODUCTION**

4 Q. PLEASE STATE YOUR NAME AND OCCUPATION.

5 A. My name is Michael O. Remington and I currently serve as Technology Services
6 Director, Application Managed Services, for Xcel Energy Services Inc. (XES),
7 the service company affiliate of Northern States Power Company, a Minnesota
8 corporation (NSPM or the Company) and an operating company of Xcel
9 Energy Inc. (Xcel Energy). I have been in my current position since February
10 1, 2021.

11 Q. PLEASE SUMMARIZE YOUR QUALIFICATIONS AND EXPERIENCE.

12 A. I am responsible for managing Technology Service's relationship with our
13 primary Application Managed Services (AMS) provider, including performance
14 monitoring, demand management, invoice review, and contract management.
15 AMS services include application maintenance, support, and enhancements, as
16 well as participation in project implementation related to current and new
17 applications. I am also responsible for directing and preparing testimony,
18 supporting documents, and discovery responses related to Technology Services
19 in filings before the Minnesota Public Utilities Commission (Commission) as
20 well as for other Xcel Energy operating companies (OpCos).

21
22 I have over 25 years of experience in the field of Information Technology (IT),
23 a significant portion of which has been devoted to my tenure at Xcel Energy.
24 After almost eight years at IBM Global Services where I filled IT roles under
25 contract for Xcel Energy, I joined Xcel Energy in July 2008 as a Senior Manager
26 of IT Service Management, where I served continuously for 11 years. My team
27 was responsible for the administration of core IT service management processes

1 (change, problem, request fulfillment, configuration, and asset management).
2 We also ensured compliance and audit readiness for several North American
3 Electric Reliability Corporation (NERC) regulatory standards and Sarbanes-
4 Oxley Act of 2002 controls. During the period from October 2013 to January
5 2015, I embarked on an additional endeavor alongside my role as Senior
6 Manager of IT Service Management. This temporary assignment within the
7 General Counsel organization provided a unique opportunity for me to practice
8 law on behalf of Xcel Energy, undertaking transactional work, and overseeing
9 equal employment opportunity and safety investigations. From July 2019 to
10 January 31, 2021, I was Director of IT Operations. In that role, I was
11 responsible for managing major incidents, monitoring Information Technology
12 (IT) infrastructure and applications, disaster recovery planning, and managing
13 several core IT service management processes.

14
15 My résumé is attached as Exhibit____(MOR-1), Schedule 1.
16

17 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

18 A. I present and support the Company's capital and operation and maintenance
19 (O&M) budgets during the 2024 test year for the Technology Services area.
20

21 Q. PLEASE PROVIDE AN OVERVIEW OF THE TECHNOLOGY SERVICES AREA WITHIN
22 XCEL ENERGY.

23 A. Technology Services provides IT services across Xcel Energy. Like all utilities,
24 Xcel Energy must invest in computers, software, networks, mobile devices, and
25 other IT services each year in order to (among other things):

- 26 • Coordinate work in the field;
- 27 • Interact with customers;

- Run our gas system;
- Provide information to our state and federal regulators;
- Purchase gas;
- Bill and collect for services efficiently;
- Develop budgets and track expenditures;
- Manage vendors and vendor contracts; and
- Compensate employees.

Each of these activities is necessary to provide reliable natural gas service and a positive customer experience.

Q. CAN YOU PROVIDE AN OVERVIEW OF THE WORK TECHNOLOGY SERVICES WILL BE PERFORMING DURING THE 2024 TEST YEAR?

A. Yes. Technology Services will continue much of our fundamental IT work, including replacing aging technology; protecting customers and the Company against cyber security risks and attacks; and strategically enhancing our IT capabilities to improve our customer and employee experiences.

This ongoing, fundamental IT work is necessary due to the rapidly changing nature of technology and evolving business needs. With typical asset lives ranging from three to seven years (depending on the system), the average lifespan of IT assets is considerably shorter than it is for assets in many other business areas. With these changes in technology and corresponding changes in customer expectations, we will continue to be flexible and nimble, working within the resources available to us, to address new technologies and needs as they emerge.

1 Q. PLEASE PROVIDE A SUMMARY OF YOUR TESTIMONY.

2 A. In my Direct Testimony, I describe the Technology Services organization, as
3 well as some of the IT and business continuity services we provide. I illustrate
4 that our capital and O&M investments in recent years have increased in light of
5 the rising importance of IT in our business, but have also varied year-to-year
6 based upon the needs of the Company and our customers, leading to a lower
7 2024 test year budget compared to 2023 and 2022. I explain the kinds of
8 investments we are currently making, why they are important to meet our
9 customers' changing energy needs, and how we work to ensure reasonable costs
10 for those investments.

11
12 I present our proposed capital additions of approximately \$11.1 million for 2024
13 on an NSPM (State of Minnesota Gas Jurisdiction) basis.¹ I provide support for
14 the key investments we seek to recover in base rates during the test year.

15
16 I begin by walking through the major capital projects that comprise these rate
17 case budgets, organizing projects according to the following budget groupings:
18 (1) aging technology, (2) cyber security, (3) customer experience, (4) enhancing
19 capabilities, and (5) emergent demand.

20
21 I then discuss the Technology Services O&M budget for 2024, which is
22 increasing modestly compared to prior years. I explain why our O&M budget is
23 reasonable and reflects the types of expenditures we must make to keep the
24 technology side of our business running productively.

¹ All costs for capital additions in my testimony are stated on an NSPM (State of Minnesota Gas Jurisdiction) basis, including gas and common unless otherwise noted. Capital projects that would be only assigned to the State of Minnesota Electric jurisdiction are not included. As discussed in more detail below, Technology Services O&M costs are presented for the NSPM State of Minnesota Gas Jurisdiction.

1 Q. HOW HAVE YOU ORGANIZED YOUR TESTIMONY?

2 A. My testimony is organized into the following sections:

- 3 • *Section II* – Technology Services Overview
- 4 • *Section III* – Capital Investments
- 5 • *Section IV* – O&M Budget
- 6 • *Section V* – Conclusion

7

8 **II. TECHNOLOGY SERVICES OVERVIEW**

9

10 Q. PLEASE DESCRIBE TECHNOLOGY SERVICE'S KEY ROLES AND RESPONSIBILITIES.

11 A. Technology Services is the Company's centralized IT organization, providing
12 technology services across all operating companies, including NSP-Minnesota.
13 These services include support for the following business operations:

- 14 • *Foundational Technology Infrastructure.* Technology Services is responsible
15 for providing support for each employee's hardware and software needs.
16 This includes maintaining and updating the hardware and operating
17 systems used on employee computers and servers, providing network
18 connectivity, and providing sufficient data storage capabilities.
19 Technology Services is also charged with protecting the security of the
20 Company's data from cyber attacks.
- 21 • *Systems Controls.* Technology Services provides technology support to our
22 natural gas distribution units to help manage and operate the gas systems.
23 This includes providing and supporting software applications such as
24 Supervisory Control and Data Acquisition (SCADA), which is used to
25 monitor the health of the natural gas distribution systems.
- 26 • *Customer Support.* We provide support for infrastructure and software that
27 facilitate interactions with our customers. This includes maintaining the

1 Customer Resource System (CRS), which is the Company's customer
2 information system of record, which generates approximately 4 million
3 billing statements to Xcel Energy customers on a monthly basis. We also
4 support the Interactive Voice Response (IVR) software that enables
5 interaction with customers via telephone keypad or speech recognition.
6 Technology Services is also responsible for maintaining the technology
7 used for the Company's website that provides valuable information to
8 customers about their accounts and Company operations including
9 outages.

- 10 • *Corporate Support.* We provide IT support for necessary corporate
11 functions of the Company such as Human Resources and Financial
12 Management. This includes providing and maintaining software
13 applications that assist in the creation, tracking, reporting, and analysis of
14 budget and forecast information.

15
16 Q. HOW DOES TECHNOLOGY SERVICES SUPPORT THE SERVICES OR FUNCTIONS
17 DESCRIBED ABOVE?

18 A. Along with our day-to-day work to support the IT we have deployed,
19 Technology Services makes capital investments and incurs O&M costs to
20 support other business areas and functions across Xcel Energy. I will discuss
21 our capital investments and O&M trends in more detail below.

22
23 Q. WHY IS TECHNOLOGY SERVICES IMPORTANT TO THE COMPANY AND ITS
24 CUSTOMERS?

25 A. Technology Services provides the technologies and supporting services
26 necessary for system reliability and security, operational decision-making, and
27 improved customer support and business capabilities. Technology is constantly

1 advancing and evolving as a foundational aspect necessary to help any business
2 meet its goals and objectives. In today's world, no large business can function
3 in a safe and reliable manner, or provide appropriate customer service levels,
4 without IT investments. For example, the IT and Operations Technology (OT)
5 convergence, two traditionally separate systems, merges business insights,
6 controls and processes in a single uniform environment. This convergence
7 allows utilities to reduce errors, improve efficiency, enhance workflows, and
8 manage costs. There is an increasing reliance on data enabled by technology to
9 make informed decisions on equipment status, demand load management, and
10 other critical functions in the utility business. Actionable and accurate data are
11 dependent on system integrations to ensure all relevant factors are considered
12 from multiple information sources. IT is also a critical component of effective
13 customer interactions and managing work and employees – whether from a
14 human resources (HR) or field workflow perspective, and to enable day-to-day
15 functions of the business, such as through the use of laptops, field devices,
16 conference rooms, and other communications equipment.

17
18 To operate in an environment where technology is constantly evolving, we must
19 be smart and proactive by identifying and integrating technologies that will both
20 advance our business and protect it from technological attacks. For example,
21 the advancements in two-way communications, intelligent devices, and SCADA
22 necessitate the integration of many systems to ensure effective use of
23 information and enable operational capabilities of new technologies. Identifying
24 new technologies and integrating them into our system supports smarter gas
25 operations, system optimization, a more effective workforce with better-
26 enabled employees, and more informed stakeholders through closer
27 connections with external parties. These developments increase the importance

1 of technology, and in turn Technology Services, to the Company and each of
2 our stakeholders.

3 4 **III. CAPITAL INVESTMENTS**

5 6 **A. Overview**

7 *1. 2020-2022 Technology Services Capital Additions*

8 Q. WHAT WERE THE DRIVERS OF TECHNOLOGY SERVICES CAPITAL INVESTMENTS
9 OVER THE PAST FEW YEARS, FROM 2020 TO 2022?

10 A. Over the past few years, as our IT systems age, business and regulatory
11 requirements change, and technologies evolve, the Company continued phased
12 replacements and upgrades to the Company's systems.

13
14 Q. WHAT SYSTEM UPGRADES AND REPLACEMENTS DID THE COMPANY
15 UNDERTAKE DURING THE 2020-2022 PERIOD?

16 A. We have continued to invest in routine maintenance as well as projects to
17 address outstanding business needs, including cyber security, improving
18 communication capabilities, and supporting a safer, more efficient workplace.
19 During this period, we have also significantly enhanced our focus on the
20 customer experience as changing customer expectations are requiring us to
21 work to continuously improve and maximize the performance of the tools
22 serving customers.

23
24 In addition, refreshing end of life network infrastructure was (and continues to
25 be) a key driver of increased investment and requires attention on an ongoing
26 basis. Network connectivity is a critical operational foundation required for the
27 Company to provide a safe and reliable product, which, stated simply, is the

1 extensive process of connecting locations across our Company for transfer of
2 voice and data. The process of refreshing network connectivity devices follows
3 a risk management practice. Failure to replace aging network mechanisms would
4 increase the risk of component level failures resulting in systemic outages across
5 service venues.

6
7 Other major investments during this period included projects to enhance the
8 Company's technological capabilities, such as the Digital Operations Factory
9 project, which deployed a centralized data and analytics platform that automates
10 manually intensive tasks, including work identification, prioritization,
11 scheduling and dispatch, enabling improved utilization of operations resources
12 performing maintenance activities. In addition, the Company placed into service
13 the ServiceNow project, which facilitates IT service delivery, asset management,
14 and regulatory compliance, and is intended to lead to higher IT customer service
15 satisfaction by improving the Company's ability to route information more
16 effectively.

17
18 Finally, as another example of the kinds of IT assets placed into service during
19 this time period, the Gas Plant SCADA Delta V Replacement capital addition
20 replaced the existing Gas SCADA systems at the Westcott, Sibley, and
21 Maplewood Gas plants as part of the first of two phases in this project. I discuss
22 later in my testimony capital additions implemented under Phase 2 of this
23 project for the 2024 test year.

1 Q. WHAT WERE THE TECHNOLOGY SERVICES ACTUAL CAPITAL ADDITIONS FOR
2 THE YEARS 2020-2022?

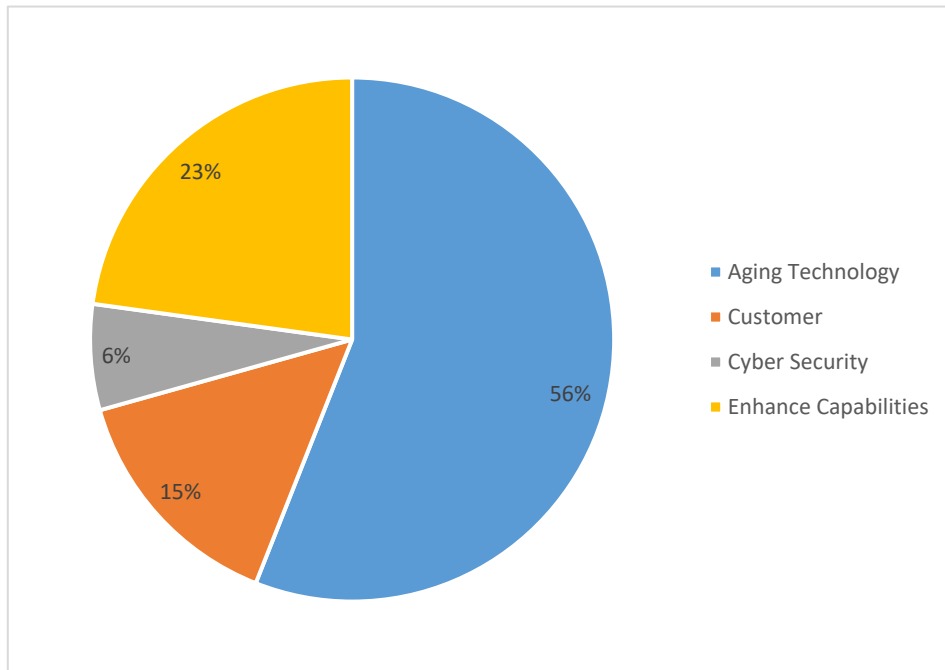

3 A. The 2020-2022 capital investments that the Company made are provided below
4 in Table 1 and Figure 1.

5
6 **Table 1**
7 **2020-2022 Capital Additions**
8 **(Dollars in Millions)**

NSPM	2020	2021	2022
Capital Category	Actual	Actual	Actual
Aging Technology	\$3.4	\$3.7	\$15.0
Customer	1.5	0.3	4.0
Cyber Security	0.8	0.4	1.4
Enhance Capabilities	0.3	2.8	6.0
Total	\$5.9	\$7.1	\$26.5

9
10
11
12
13
14 *There may be differences between the sum of the individual category amounts and
15 Total amounts due to rounding.
16

Figure 1
2020-2022 NSPM Capital Additions

Q. CAN YOU EXPLAIN WHY THE AMOUNTS OF INVESTMENT IN THESE CAPITAL BUDGET GROUPINGS HAVE INCREASED OVER THESE THREE YEARS?

A. Yes. There is no doubt that over time, the need for capital investment is increasing in order to effectively manage our business. As I previously discussed, the IT and OT convergence allows utilities like the Company to reduce errors, improve efficiency, enhance workflows, and manage costs, but the Company is also increasingly relying on data enabled by technology, which helps the Company make informed decisions about critical functions. In turn, such investments drive O&M increases, which include new licensing and maintenance agreements to support the technology and are more costly due to rising inflation. Since our needs vary year to year depending on the needs of the technology systems, we can evaluate each year individually. In 2020, while our needs focused on aging technologies, upgrading our cyber security capabilities,

1 and enhancing the Company's capabilities, we also continued significant
2 investments in the customer experience area, which started in 2019, and which
3 I will discuss in more detail later in my testimony. In 2021, aging technology
4 took a front seat followed by enhancing the Company's capabilities. In 2022,
5 more than half of our closings were related to aging technologies, most notably
6 with our Gas Plant SCADA Replacement work, life cycle management projects
7 (routine refreshes), and VoIP Refresh. In addition, we also continued with
8 investments to improve the customer experience in 2022.

9
10 Q. LOOKING AT THIS HISTORY, WHAT DO YOU CONCLUDE?

11 A. Technology Service's prior capital investments have supported the technologies
12 needed to provide gas service to our customers. Without ongoing investment
13 in technologies, we would lack the tools to operate reliably and securely, support
14 functional decision-making, enable communications and "smart" resources, and
15 protect such fundamentally important resources as our gas operations, our
16 customer information, and our financial data.

17
18 Q. MOVING FORWARD, CAN YOU ADDRESS TECHNOLOGY SERVICE'S CAPITAL
19 WORK IN 2023 SO FAR?

20 A. Yes. We have continued to invest in routine replacements as well as projects to
21 address outstanding business needs. In 2023, the Company is focused on aging
22 technology. Most notably, the Core HR Application project is continuing to
23 move forward, focusing on the replacement of legacy timekeeping, benefits, and
24 payroll systems that have been out of support for several years with more
25 modern applications, including Workday. In addition, the Technology Licenses
26 project continues, focusing on our Microsoft contract renewals that are required
27 in 2023.

2. *Overview of the 2024 Test Year*

Q. WHAT IS THE COMPANY'S CAPITAL ADDITION FORECAST FOR THE 2024 TEST YEAR BY CAPITAL BUDGET GROUPING?

A. Our capital addition forecast by budget grouping for 2024 is set forth in Table 2 and Figure 2, below. Individual project capital investment additions are also listed in Exhibit____(MOR-1), Schedule 2.²

Table 2
2024 Capital Additions
(Dollars in Millions)

NSPM	2024
Category	Test Year
Aging Technology	\$5.5
Customer	1.7
Cyber Security	0.6
Emergent Demand	0.8
Enhance Capabilities	2.4
Total	\$11.1

*There may be differences between the sum of the individual category amounts and total amounts due to rounding.

² In some cases, rounding may result in a slight variation between some tables and Exhibit____(MOR-1), Schedule 2.

Figure 2
2024 NSPM Capital Additions

Q. WHAT KEY PROJECT AREAS WILL THE COMPANY INVEST IN DURING THE 2024 TEST YEAR?

A. Our aging network infrastructure continues to be a key driver of increased investment and requires attention on an ongoing basis, which as I previously indicated is a critical operational foundation required for the Company to provide a safe and reliable product. In addition, we continue to seek out areas that will enhance the Company's capabilities to provide service to our customers, such as through our Private LTE project, and by improving customer experiences in their interactions with the Company through continued implementation of components that build on our foundational customer experience investments. We also continue to focus on our addressing cyber security risks the Company faces. I will discuss these efforts in more detail later in my testimony.

1 Q. CAN YOU PROVIDE AN OVERALL PICTURE OF YOUR CAPITAL ADDITIONS AND
2 CAPITAL EXPENDITURES TRENDS FROM 2020 THROUGH THE END OF THE TEST
3 YEAR (2024)?

4 A. Yes. Our overall 2020 through 2024 capital additions and capital expenditures
5 are set forth in Tables 3 and 4 below.

6
7 **Table 3**
8 **2020-2024 Capital Additions**
9 **(Dollars in Millions)**

NSPM	2020	2021	2022	2023	2024
Category	Actual	Actual	Actual	Forecast	Test Year
Aging Technology	\$3.4	\$3.7	\$15.0	\$13.3	\$5.5
Cyber Security	0.8	0.4	1.4	2.7	0.6
Enhance Capabilities	0.3	2.8	6.0	7.1	2.4
Customer	1.5	0.3	4.0	2.4	1.7
Emergent Demand	-	-	-	0.02	0.8
Total	\$5.9	\$7.1	\$26.5	\$25.5	\$11.1

17 *There may be differences between the sum of the individual category amounts and Total
18 amounts due to rounding.

Table 4
2020-2024 Capital Expenditures
(Dollars in Millions)

NSPM	2020	2021	2022	2023	2024
Category	Actual	Actual	Actual	Forecast	Test Year
Aging Technology	\$4.9	\$7.8	\$10.3	\$13.0	\$4.0
Customer	1.7	2.2	1.3	1.4	3.1
Cyber Security	0.7	1.1	1.4	1.9	0.4
Emergent Demand	-	-	-	0.07	1.6
Enhance Capabilities	1.3	3.0	6.3	6.7	4.0
Total	\$8.7	\$14.0	\$19.3	\$23.1	\$13.0

*There may be differences between the sum of the individual category amounts and Total amounts due to rounding.

Tables 3 and 4 illustrate that Company investments in IT vary depending on the specific work that is necessary for our business and our customers in a specific year. In the years when less investment is needed, we budget accordingly, and Company resources are used where they may be required in other business areas. Conversely, Technology Services capital expenditure levels necessarily increase in years when we are embarking on significant initiatives, and capital additions necessarily increase when those initiatives are placed in service.

Q. WHY DO CAPITAL ADDITIONS TOTALS DIFFER FROM CAPITAL EXPENDITURE TOTALS?

A. While the capital addition trend is affected by our capital expenditures, the capital additions (plant in service) trend may not mirror the capital expenditure (spend) trend and may fluctuate more depending on the length of time individual projects require to complete. The capital expenditure trend reflects the progress of the project through the months, whereas the capital addition trend reflects the total at the conclusion of the construction or implementation

process when the asset is placed in service. Company witness Allison M. Johnson addresses how the Company's overall capital additions align with budgeted capital additions in any given year.

Q. WHAT MAJOR CAPITAL PROJECTS ARE DRIVING THE COMPANY'S 2024 TEST YEAR REQUEST?

A. As shown Table 5 below, we anticipate undertaking four major capital projects in 2024. These capital additions include:

Table 5
2024 Major Capital Projects
(Dollars in Millions)

NSPM	2024
Project	Test Year
Private LTE	\$1.9
Customer Experience Transformation Phase 3	1.7
Gas Transaction System (GTS) - Measurement	1.5
Gas Plant SCADA Replacement	1.3
Total	\$6.3

*There may be differences between the sum of the individual category amounts and Total amounts due to rounding.

I describe these projects in more detail in Section III.D of my Direct Testimony.

Q. WHAT DO YOU CONCLUDE ABOUT TECHNOLOGY SERVICE'S 2024 CAPITAL INVESTMENT FORECAST?

A. I conclude that our capital forecast represents an accurate, reasonable, and representative picture of our IT investments. History demonstrates that the Company will make the investments necessary to serve customers safely and

1 reliably. Technology Services capital additions are necessary to maintain stability
2 and reliability of the IT systems used by employees to serve Minnesota
3 customers, efficiently manage business operations, protect Company data and
4 information, and meet evolving regulatory and legal requirements. Overall, they
5 support important investment strategies that focus on the key IT needs of the
6 Company and our customers while balancing the need for overall cost
7 containment and prioritization. Therefore, the 2024 forecast can be relied on to
8 set just and reasonable rates for our customers.

9
10 *3. Challenges Facing the IT Business Area*

11 Q. ARE THERE CHALLENGES UNIQUE TO TECHNOLOGY SERVICES THAT CAN
12 AFFECT THE COMPANY'S BUDGETING AND ACTUAL EXPENDITURES?

13 A. Yes. Technology changes constantly. As a result, issues with older software or
14 equipment may not seem critical during budget creation but become critical if
15 systems begin to show signs of issues or failure, or no longer serve their
16 intended purpose. Additionally, cyber security threats are constantly in flux and
17 may require additional investment in a given year to ensure that cyber security
18 tools and resources are responsive to new threats to our information systems.
19 As IT has become increasingly critical to the business, the demand for new or
20 enhanced IT solutions far outpaces the dollars available to meet those requests.
21 As a result, it is necessary to constantly monitor, and sometimes re-prioritize,
22 the percent of total dollars invested in each capital budget grouping.

23
24 Q. WILL TECHNOLOGY SERVICES STILL MANAGE ITS OVERALL CAPITAL
25 INVESTMENTS TO ITS OVERALL BUDGET?

26 A. Yes, it will. Our overall budget supports our investments in technologies and
27 supporting services as necessary to ensure system reliability and security, to

1 facilitate operational decision-making, and to provide the necessary levels of
2 support to our customer support and business capability functions. Technology
3 Services is expected to manage its capital additions to its capital budget once
4 that budget has been developed, fully vetted, and approved, as I discuss in
5 Section III.C.

6
7 **B. Technology Services Investment Needs**

8 Q. WHAT ISSUES ARE DRIVING TECHNOLOGY SERVICE'S STRATEGIC CAPITAL
9 PLANNING?

10 A. As I discussed above, the five key areas driving IT investment for the gas
11 business and ultimately capital additions in the 2024 test year are: (1) replacing
12 aging technology; (2) addressing evolving cyber security threats and
13 requirements; (3) enhancing capabilities; (4) enhancing the customer experience;
14 and (5) addressing emergent demands. I discuss each of these areas below,
15 explaining why they are important to conduct our business and serve customers.
16 I will also explain how we are addressing emergent demands in the next section,
17 Project Budgeting and Governance.

18
19 *1. Aging Technology*

20 Q. WHAT ARE THE PRIMARY ISSUES FACING THE COMPANY WITH REGARD TO
21 AGING TECHNOLOGY?

22 A. Technology Services supports the operations of the Company with a large and
23 growing IT infrastructure. Information assets are no different from physical
24 assets, although IT assets have generally shorter lives, as I previously mentioned.
25 They are subject to aging, technological obsolescence, and increasing
26 maintenance costs. Technology Services not only completes routine annual
27 refreshes of technology (or what we also call life cycle management projects,

typically completed on regular cycles), like replacing computers and printers or refreshes of other smaller components, but also plans and places in service large IT projects that modernize the Company's IT and address the needs and experiences of our customers and employees. A reasonably up-to-date infrastructure is necessary for the Company to continue to meet increasingly demanding data security, reliability, and compliance requirements, as well as the service expectations of our customers. For example, some aging technologies are not equipped with the most current data security measures, meaning they are more vulnerable to cyberattack. In addition, the recovery of aging technologies after an outage can be compromised if those systems are no longer supported by their vendor.

Q. HOW DOES THE COMPANY DETERMINE WHEN EXISTING IT NEEDS TO BE REPLACED?

A. Technology Services strives to maximize our technology investments by maintaining existing software and hardware until the risk and costs associated with keeping these aging technologies in place require attention. For instance, new software systems are often necessary when the existing software is no longer supported by the vendor, which may lead to reliability issues (e.g. system failures or cyber security vulnerabilities) due to the vendor no longer providing security upgrades or patches, or when the age of a system results in it no longer being compatible with other systems, which in turn may impact business operations.

2. *Cyber Security*

Q. PLEASE SUMMARIZE THE CYBER SECURITY ISSUES FACING THE COMPANY.

A. Investments in cyber security ensure the availability, integrity, and

1 confidentiality of our IT systems, as well as compliance with legal and regulatory
2 obligations. These investments provide prevention, detection, containment, and
3 repair services to protect the Company from cyberattacks and to assist in
4 recovery if such an attack occurs. A good example of the types of cyber security
5 projects that we have implemented is the Multi-factor Authentication project,
6 which deployed a multi-method, multi-level process for the authentication of
7 individuals who attempt to access Xcel Energy's network, as well as ensuring
8 that the device used is compliant from a security perspective.

9
10 Cyber security does not, however, generally include physical security
11 investments, such as property security. Physical security is part of Shared
12 Corporate Services and is discussed by Company witness Christopher R.
13 Haworth.

14
15 Q. WHAT IS TECHNOLOGY SERVICES DOING TO ADDRESS THOSE CYBER SECURITY
16 ISSUES?

17 A. The Company has taken great strides to address cyber security issues. In
18 particular, Xcel Energy has a dedicated Enterprise Security and Emergency
19 Management (ESEM) business area. The purpose of the ESEM is to enable the
20 Company's vision, mission, and goals by proactively leading efforts to identify,
21 protect, detect, and respond to all-hazard threats and events. The ESEM
22 oversees all aspects of security, which includes: cyber, physical, and personnel;
23 investigations and digital forensics; threat management; privacy (customer and
24 employee); and enterprise emergency management. There are multiple ways that
25 the ESEM addresses new threats and solutions to cyber security issues.

1 First, ESEM exists to manage our overall cyber security posture, implement
2 processes and plans to be able to quickly mitigate any adverse events, respond
3 appropriately and effectively to large scale events that would otherwise cause
4 significant harm to natural gas delivery systems, and ensure regulatory
5 compliance.

6
7 Second, to meet the needs and demands of today's security requirements,
8 Technology Services has implemented multiple security systems and
9 technologies. We have implemented technologies to date that include:
10 Vulnerability Management; Advanced Threat Protection; Security Forensic
11 Tools; Advanced Firewalls Intrusion Prevention Devices; and a Security
12 Incident and Event Management system to correlate all the data and bring
13 visibility to what is happening on our infrastructure.

14
15 Third, we have enhanced our partnerships with both state and federal agencies,
16 in addition to industry associations, in order to ensure that we are tapped into
17 the stream of information available regarding impending threats and attacks.
18 These associations and agencies include Edison Electric Institute, National
19 Infrastructure Advisory Council, American Gas Association, the Federal Bureau
20 of Investigation, and the U.S. Department of Homeland Security.

21
22 Finally, our disaster recovery team works with application support teams to
23 validate their disaster recovery plans on an annual basis. We have also
24 implemented an isolated infrastructure and computing platform to enable
25 thorough testing of recovery plans for certain critical applications, such as those
26 running on the SAP platform, to ensure full recoverability. This work protects
27 our assets and our customers, but requires continuing vigilance.

1 3. *Enhancing Capabilities*

2 Q. HOW DOES TECHNOLOGY SERVICES ASSIST IN ENHANCING CAPABILITIES FOR
3 THE COMPANY?

4 A. Technology can offer the opportunity to improve productivity, enhance
5 communications between systems and between people, and use data more
6 efficiently. Technology Services is constantly evaluating new technologies and
7 helping business areas examine ways to increase efficiencies and enhance
8 communications between systems that benefit the Company and our customers.
9 An example of an enhancing capabilities project is the Strategic Fiber
10 Deployment Project, where the Company will acquire fiber optic cable assets in
11 order to better support enterprise network connectivity.

12
13 Q. HOW DOES TECHNOLOGY SERVICES DETERMINE WHICH CAPABILITY-
14 ENHANCING TECHNOLOGIES TO IMPLEMENT?

15 A. Technology Services partners with business area stakeholders to identify and
16 implement technologies that are intended to contribute to improved safety,
17 increased efficiencies, employee and customer satisfaction or other
18 improvements. Technology Services works prudently with various business
19 units to evaluate new technologies to determine whether they can be used to
20 improve efficiency in the way tasks are completed, data is used, or in the way
21 communications are conducted within the organization and with external
22 stakeholders, including our customers.

1 4. *Customer Experience*

2 Q. WHAT IS TECHNOLOGY SERVICES REFERRING TO WHEN IT DISCUSSES A
3 “CUSTOMER EXPERIENCE”?

4 A. The customer experience refers to the Xcel Energy customer’s direct
5 interactions with the Company, whether by digital platforms, through the call
6 center, or in person. Managing the experience requires both system tools and
7 customer interfaces that work for the customer, supporting their satisfaction
8 with their service and overall experience with the Company.

9
10 Q. PLEASE DESCRIBE EFFORTS BY THE COMPANY TO ENHANCE THE CUSTOMER
11 EXPERIENCE THROUGH IT.

12 A. While all of Technology Services’ work puts the customer front and center,
13 prior to 2019 it had been several years since we had invested significantly in
14 primary customer touch points and relationship management tools. In support
15 of the enterprise focus on enhancing customer experience, Xcel Energy
16 launched a specific Customer Experience Transformation (CXT) program in
17 2019 to help create smarter and simpler experiences for employees and
18 customers and created a new category called customer enhancements. This
19 multi-year effort is designed to simplify Company technology, transform
20 customer experiences, improve customer satisfaction and employee
21 engagement, and continue to drive more efficient operations. CXT is designed
22 to work strategically on enhancing digital channels, developing a data fabric
23 model and migrating customer and business data into the model, and deploying
24 the foundational components to allow the first two to operate. More
25 specifically, Xcel Energy is utilizing more modern technologies that customers
26 have come to expect through experiences with other companies. This includes

1 interactive websites, account management options, and smart phone
2 applications.

3
4 As more modern technologies become available for customers, it will be
5 necessary to continue to invest in new capabilities like mobility, data and
6 analytics, and customer relationship management. Front line employees'
7 innovative thinking is being used to align with our customers' needs and
8 expectations.

9
10 Q. MORE SPECIFICALLY, WHAT IS THE CXT PROGRAM?

11 A. CXT is a program developed to work strategically on enhancing our digital
12 channels, developing a data fabric model and migrating our customer and
13 business data into the model, and designing, building, testing, and deploying the
14 foundational components to allow the first two to operate. More specifically,
15 we are utilizing more modern technologies that our customers have come to
16 expect through experiences with other companies. This includes interactive
17 websites, account management options, and smart phone applications. The
18 initial CXT program is a series of foundational investments in platform
19 infrastructure and data analytics and automation that are intended to improve
20 the Company's digital interfaces with customers. Recognizing that additional
21 work will likely be needed and that customers will need to acclimate to changed
22 interfaces with the Company, initial work and investments to improve the
23 customer experience were divided into certain project areas: (1) Digital Channel
24 Platforms (including MyAccount, the Company's website, Xcel Energy mobile
25 applications, and new customers and real estate developers' initial connections
26 with the Company (Customer Connect)); (2) the Customer Relationship

1 Management (CRM) Platform (currently Salesforce); (3) Platform Infrastructure
2 and Technology Maintenance; and (4) Data Analytics and Automation.

3
4 Q. WHAT PROGRESS HAS THE COMPANY MADE ON THIS INITIATIVE TO DATE?

5 A. We approached this program in phases, with initial deployments implemented
6 in 2020 and which continued throughout 2021 into 2022. Xcel Energy has now
7 deployed the technology foundation on which new experiences are being built,
8 including services like new customer connections and our service channels.
9 While most of this foundational work was completed by 2021, CXT program
10 work will continue, with additional components being placed in service in the
11 2024 test year and in the future to build on the foundational work and continue
12 to enhance customer experiences. I discuss these investments further in Section
13 III.D.4.

14
15 **C. Project Budgeting and Governance**

16 *1. Methodology for Establishing a Reasonable Overall Budget*

17 Q. HOW DOES THE TECHNOLOGY SERVICES AREA ESTABLISH A REASONABLE
18 CAPITAL BUDGET FOR A GIVEN YEAR?

19 A. The appropriate annual capital budget for Technology Services is based on a
20 partnership between corporate management of overall finances and the
21 business needs we identify. Company witness Haworth explains how the
22 Company establishes overall business area capital spending guidelines and
23 budgets based on financing availability, specific needs of business areas, and
24 overall needs of the Company.

25
26 The Technology Services area itself employs a “bottom-up” approach to
27 planning for the needs our business area addresses. Technology Services will

1 continue to use a portfolio prioritization and balancing process to determine
2 the needs we must address and decide how to allocate limited funds according
3 to the highest business priorities, including the greatest demands our IT systems
4 face in each year. The portfolio is regularly prioritized and balanced to support
5 established strategic objectives using predefined portfolio management criteria,
6 the organization's desired risk profile, portfolio performance metrics, and
7 capacity constraints. These projects are then rolled up to total budgeted costs
8 by capital budget groupings. Often the desired initial budget exceeds the
9 spending guidelines, which then requires review meetings with managers,
10 directors, and vice presidents to assess the requested budget and determine the
11 right course of action.

12
13 Because this happens throughout the Company, a higher or lower percentage
14 of the Company's overall resources may be allocated to Technology Services in
15 any given year, depending on the priority of needs throughout the Company.
16 Ultimately, corporate leadership determines the amount of money to be
17 allocated to Technology Services for each year, as part of the total budget
18 development for the Company.

19
20 Q. HOW DOES TECHNOLOGY SERVICES MANAGE ITS BUDGETED PROJECTS TO THE
21 OVERALL CAPITAL BUDGET ALLOTTED TO IT?

22 A. Once the Technology Services allotment is known, Technology Services uses
23 the Technology Investment Governance (TIG) process to evaluate all proposed
24 Technology Services investments. The TIG process is the Company's IT budget
25 development, project prioritization, and project oversight process, which helps
26 to establish budgets that are reasonable and to manage our capital expenditures
27 accordingly. The TIG process helps ensure Company budgets are reasonably

1 reflective of the projects that will be placed in service during the relevant year
2 or years.

3
4 As part of the TIG process, key business and IT leaders are accountable for
5 managing demand intake, prioritization, and business outcomes of the IT
6 projects in their portfolios as they move from project inception towards in-
7 service, thereby ensuring that projects comply with IT portfolio and project
8 management requirements. TIG leadership is comprised of business area and
9 IT senior leaders. Projects are reviewed so that scope and costs are managed
10 from inception through implementation. Company leadership has final
11 approval for either maintaining the portfolio “as is” or adjusting the portfolio
12 within the established budget thresholds. The purpose is to determine whether
13 the projects included in the budget are sound, viable, and worthy of funding,
14 support, and inclusion in the Company’s IT portfolio. The process of adjusting
15 the portfolio may include:

- 16 • adding new projects that have been selected and prioritized for inclusion
17 in the budget;
- 18 • identifying projects that are not authorized based on the review process;
19 or
- 20 • identifying any projects to be suspended, reprioritized, or terminated
21 based on the review process.

22
23 The TIG process and its “Gated” approval procedures are presented in more
24 detail in Exhibit____(MOR-1), Schedule 3.

1 2. *Changes in Planned Projects*

2 Q. AS A PROJECT MOVES THROUGH DEVELOPMENT, DOES TECHNOLOGY SERVICES
3 TAKE STEPS TO MONITOR VARIANCES BETWEEN ITS ACTUAL EXPENDITURES
4 AND ITS BUDGET?

5 A. Yes. After cost estimates are developed, all projects follow the TIG process,
6 requiring reviews and approvals of the budget by Business Portfolio Owners,
7 while the portfolio level budgets are approved at the senior leader and executive
8 levels. After these approvals, project capital and O&M are reviewed monthly to
9 compare budget to actual expenditures. Technology Services and the TIG
10 leaders evaluate deviations to determine whether costs are appropriate. In
11 addition, Technology Services develops action plans to mitigate variations in
12 actual to budgeted expenditures. These mitigation plans may either reduce or
13 delay expenditures to support the overall authorized budget. If authorized
14 budget adjustments are required, they are identified and approved through the
15 TIG process.

16
17 Q. DOES TECHNOLOGY SERVICES ALSO ENCOUNTER TIMES WHEN IT MUST
18 CHANGE PROJECT PLANS?

19 A. Yes. For some projects, the complex nature of the project implementation and
20 long lead times mean we must plan for the project and carry it out over a long
21 period of time. In these situations, we may need to adjust project cost
22 expectations, timelines, or scope as the details and design of the project become
23 more certain over time.

24
25 Other projects may have shorter lead times, a lower priority, or other reason
26 why they are important but could be delayed if a higher priority comes to light.
27 However, we remain obligated to manage to our budget and use the TIG

1 process to re-prioritize projects within a year to stay within our overall budget.

2
3 Q. DO PROJECT PLAN CHANGES REQUIRE APPROVAL FROM THE TIG PROCESS?

4 A. Yes. Any change to the budget, schedule, or scope of a project must be
5 approved by the TIG process to ensure that the change is necessary and well-
6 documented and brought forward to TIG process leadership.

7
8 We must seek approvals in addition to the TIG process, including possibly
9 Corporate Governance approval, if costs of larger projects exceed certain pre-
10 approved levels.

11
12 Q. PLEASE EXPLAIN THE PROCESS TO ACCOMMODATE NECESSARY UNFORESEEN
13 CAPITAL INVESTMENTS THAT OCCUR DURING THE PLANNED CAPITAL
14 INVESTMENT YEAR.

15 A. We utilize the portfolio prioritization and balancing process to evaluate new
16 demand or changes to existing project budgets and determine the most
17 appropriate course of action. Newly identified projects must still proceed
18 through the Gates process and may push other projects further down the
19 priority list. In other situations, we may be able to accommodate a new project
20 or expanded project scope or cost by approving an appropriate distribution of
21 funds from Emergent Demand.

22
23 Q. WHAT IS EMERGENT DEMAND?

24 A. Emergent Demand is a capital investment category created to ensure we are
25 able to meet the unanticipated aging technology, cyber security threats, and
26 efficiency needs that inevitably emerge in each year. Given the ever-changing
27 nature of technology and emerging risks, it is not possible to identify all projects

1 that may arise or become critical in a given year. For example, it is not always
2 possible to predict what kind of security risk might be created by hackers as
3 technology continues to develop. In other situations, as we develop a project
4 with a particular scope, we may determine that additional benefits, including risk
5 mitigation, improved safety or increased efficiencies, could be achieved by
6 expanding the scope of the project. Emergent Demand allows the Company to
7 address such issues without necessarily delaying or cancelling previously
8 planned projects or otherwise absorbing unplanned work and costs. For the
9 2024 test year, a certain amount of the overall budget includes funds to address
10 emerging needs, in addition to a certain amount that has been specifically
11 budgeted to address emerging cyber security needs.

12
13 *3. Capital Cost Controls*

14 Q. IN ADDITION TO THE TIG PROCESS, DOES TECHNOLOGY SERVICES
15 UNDERTAKE OTHER ONGOING STEPS TO CONTROL ITS COSTS?

16 A. Yes. Technology Services is continually taking steps to control costs. These
17 efforts may include increasing or decreasing the scope of outsourced services,
18 increasing or decreasing the use of consultants, and changing service providers.
19 We also use competitive bidding practices and a multi-vendor sourcing strategy
20 where possible, which enables the Company to utilize a combination of internal
21 and external resources to minimize costs and maximize efficiencies in running
22 our systems. In addition, Technology Services actively interacts with other IT
23 organizations to learn how they control costs.

24
25 Q. CAN YOU PROVIDE MORE INFORMATION ABOUT THE COMPANY'S COMPETITIVE
26 BIDDING PRACTICES?

27 A. Yes. Wherever possible, for the Company's key capital projects, the project

1 team used, or will use, a competitive bid process to ensure that: (1) costs remain
2 in-line with the approved budget; (2) Xcel Energy receives quality service at a
3 fair price; and (3) deliverables are completed per the agreed requirements. In
4 addition, the project costs and schedules for these projects were based on
5 internal experience with similar implementations and, in most cases, coupled
6 with input from third-party consultants who we commissioned to ensure that
7 the projects will deliver functionality that supports organizational objectives.

8
9 Generally, the only times a competitive bid process cannot be used are: (1)
10 during upgrades to software or hardware components already provided by a
11 vendor, in which engaging other providers would require a complete system
12 overhaul; or (2) the limited times when multiple vendors are not available to
13 undertake the necessary work or provide the necessary technology.

14
15 Q. CAN YOU IDENTIFY OTHER SPECIFIC COST CONTROL MEASURES THE COMPANY
16 HAS UNDERTAKEN TO MANAGE COSTS?

17 A. Yes. When appropriate, we renegotiate contracts with key vendors and use a
18 multi-vendor sourcing strategy to maintain competition between vendors for
19 our business. The Company has also increased the use of fixed bid versus time
20 and materials agreements with vendors for project delivery activities. This places
21 a shared burden on the service providers to ensure costs remain within the
22 expected totals.

23
24 Q. CAN YOU EXPLAIN IN MORE DETAIL WHY A MULTI-VENDOR SOURCING
25 STRATEGY IS BENEFICIAL?

26 A. Yes. Technology Services utilizes multiple vendors to promote competition for
27 our business and create an incentive to keep the price of their services

reasonable. Overall, we are constantly managing spending, ensuring alliance with our budget, and looking for opportunities to control or reduce costs.

D. 2024 Capital Additions

Q. WHAT CAPITAL ADDITIONS IS TECHNOLOGY SERVICES PROPOSING TO MAKE IN 2024?

A. The NSPM (State of Minnesota Gas Jurisdiction) Technology Services 2024 capital additions included in our rate request are budgeted to be approximately \$11.1 million as shown in Table 6 below. These investments are presented in the budget groupings aligning with the key investment needs described earlier in my testimony. This includes the Emergent Demand category that exists to support project changes in the other capital budget groupings. I will walk through the major projects for 2024 in each grouping in this section of my testimony, focusing on the capital additions.

Table 6
2024 Capital Additions
(Dollars in Millions)

NSPM	2024
Category	Test Year
Aging Technology	\$5.5
Cyber Security	0.6
Enhance Capabilities	2.4
Customer	1.7
Emergent Demand	0.8
Total	\$11.1

*There may be differences between the sum of the individual category amounts and Total amounts due to rounding.

A. We anticipate a total of approximately \$5.5 million in capital additions in 2024 related to aging technology. In addition to more routine annual refresh projects, we will be placing specific projects in service that will have a significant impact on our IT additions across the Company. The individual projects are shown in Table 7 below and I walk through each of these projects in the following testimony.

1 a. Gas Transaction System (GTS) – Measurement

2 Q. PLEASE DESCRIBE THIS PROJECT.

3 A. The Gas Transactional System (GTS) consists of two core applications
4 developed by Quorum Business Solutions: PGAS and Quorum's Pipeline
5 Transaction Management System (QPTM). PGAS is responsible for handling
6 measurement data for gas transport meters and gas quality management. QPTM
7 collects and integrates other gas transport-related data with the information
8 provided by PGAS to support day-to-day operations of the gas transport
9 business.

10
11 Since implementation of this suite, Quorum has acquired Flow-Cal, Inc. (Flow-
12 Cal). Flow-Cal was a direct competitor to Quorum's PGAS for the management
13 of natural gas measurement data. Consequently, Quorum has informed
14 customers that PGAS will no longer be supported. As a result, the Company is
15 migrating from PGAS to Flow-Cal for management of measurement data for
16 gas transport meters and gas quality management. Simultaneously, the company
17 will upgrade to the latest version of QPTM to bolster security and minimize
18 risks tied to the integration of QPTM with Flow-Cal.

19
20 b. Gas Plant SCADA Replacement

21 Q. PLEASE DESCRIBE THIS PROJECT.

22 A. Overall, the Gas Plant SCADA System Replacement project is a multi-phase
23 project that includes work already completed in 2022 with additional
24 implementations for the 2024 test year. Phase 1 work involved the replacement
25 of the outdated Citect Gas SCADA system at the Wescott, Sibley, and
26 Maplewood Gas Plants with a modern, robust SCADA solution. The previous
27 Gas Plant SCADA system is in need of upgrading to support regular business

1 operations. For 2024, Phase 2 of the project involves physical plant device
2 modifications that will require control system upgrades at the three plants,
3 implementation of a hardware and software backup and recovery solution,
4 implementation of an operational solution for centralized communications and
5 control of the gas plants, gas turbine and compressor upgrades that will require
6 updates to the control system software, network, Programmable Logic
7 Controllers, and the emergency safety shutdown system and dependent
8 hardware.

9
10 c. Annual Refresh Projects

11 Q. PLEASE DESCRIBE “ANNUAL REFRESH” PROJECTS.

12 A. Given the breadth and depth of the different equipment Xcel Energy utilizes
13 and manages, Technology Services refreshes smaller components of technology
14 infrastructure on regular cycles. We annually budget for these replacements as
15 routine refresh projects, which we also refer to as life cycle management
16 (LFCM) projects. LFCM projects refer to those projects that relate to updating
17 or refreshing day-to-day technology on a routine basis. LFCM projects include
18 LFCM – Data Storage, LFCM – Network Services, LFCM – OT
19 Modernization, LFCM – End User Enablement, and LFCM Infrastructure
20 Services. I provide capital additions for these projects for 2024 in Table 8 below.

Table 8
2024 Annual Refresh Capital Additions
(Dollars in Millions)

NSPM	2024
Project	Test Year
LFCM - Network Services	\$.3
LFCM - End User Enablement	.2
LFCM - OT Modernization	.2
LFCM - Data Storage	.1
LFCM - Infrastructure Services	.1
Total	\$.9

Q. CAN YOU DESCRIBE THE DIFFERENT TYPES OF TECHNOLOGY THAT ARE COVERED BY EACH OF THESE REFRESH WORK ORDERS IN TABLE 8 ABOVE?

A. Yes. These refreshes cover:

- *LFCM - Network Services*: This project work involves planned replacement of network devices (switches, routers, radios, channel banks and voice systems) due to aging technology, out-of-support equipment, security vulnerabilities, and to enable new required capabilities.
- *LFCM – End User Enablement*: This project involves replacement of personal computers (PCs) and other end user devices, such as printers, annually as they reach the end of their service life.
- *LFCM – OT Modernization*: Lifecycle management for Operations Technology (OT) Modernization will help to replace and/or decommission active end of life equipment. The scope of this work will include Land Mobile Radio (LMR) replacements, Uninterrupted Power Supply (UPS) remediations and battery replacements. End of life devices leave our network and infrastructure vulnerable; updates not installed can increase security risk.

- *LFCM Data Storage*: The LFCM Data Storage project replaces data storage hardware that is no longer cost-effective to support, or that presents significant risk to operations due to aging components or lack of vendor support.
- *LFCM – Infrastructure Services*: This project involves replacing aging servers prior to failure to support business growth and maintain reliability. Lifecycle management for infrastructure services will help to replace and/or decommission active end of life equipment including the replacement of servers and licenses.

Q. HOW DOES TECHNOLOGY SERVICES DEVELOP ITS BUDGETS FOR REFRESH PROJECTS?

A. While the budget methodology varies depending on the nature of the assets to be refreshed, a refresh budget is generally determined by one or more of the following factors:

- The number of devices or systems that will reach end of life during the budget period. This is typically based on an established lifecycle plan. For example, PCs, mobile data terminals, and portable meter reading devices have a four-year life. Thus, on average, approximately 30 percent of them are replaced per year.
- The number of devices expected to permanently fail outside warranty, and in the case of portable devices, the number expected to be damaged, or lost. This is based on historical trends.
- Planned incremental growth in demand (e.g., data storage, network bandwidth, number of computer users, new physical sites, etc.). This is based on Company and industry trends and known business plans.
- The devices or systems that must be replaced to meet new security,

1 software compatibility, or business requirements.

- 2 • The devices or systems for which vendor support will cease or become
- 3 prohibitively expensive.

4 Overall, these refresh efforts result in an orderly, thoughtful, and cost-effective
5 means of managing aging technology while planning the timing and urgency of
6 aging technology upgrades or replacements in order to prioritize the most critical
7 projects.

8

9 d. ESB Modernization

10 Q. PLEASE DESCRIBE THIS PROJECT.

11 A. This project will modernize and improve the resiliency of the Enterprise Service
12 Bus (ESB) architecture. ESB is an architecture for distributed computing that
13 performs integrations among applications in a standardized and more simple
14 way across an enterprise.

15

16 e. Enterprise Gas SCADA Upgrade Project

17 Q. PLEASE DESCRIBE THIS PROJECT.

18 A. The Enterprise GAS SCADA system is responsible for monitoring and
19 controlling the entire gas network. This project focuses on updating the
20 hardware and software components of the current Gas SCADA systems, which
21 have either reached or are approaching their end-of-life, in order to maintain
22 the functionality and reliability of the gas network monitoring and control.

23

24 f. WAN NSPMN

25 Q. PLEASE DESCRIBE THIS PROJECT.

26 A. This project includes the detail design, planning, installation and commissioning
27 of equipment that comprises an expansion and privatization of the Company's

1 corporate Wide Area Network (WAN) across our service territories. The WAN
2 work includes network infrastructure investments to support connection
3 between the Company's various locations together and providing the pathway
4 to enable critical business services. Investments support communication
5 services for our business including the SCADA connectivity for monitoring and
6 control of the gas system. In addition, enterprise services are delivered to enable
7 end users to connect to corporate applications like email, General Ledger, Work
8 and Asset Management system, and internet access.

9
10 g. VoIP Refresh

11 Q. PLEASE DESCRIBE THIS PROJECT.

12 A. This project aims to support core day-to-day voice communication functions
13 crucial for business operations by upgrading Company technologies for the
14 delivery of voice communications over the Internet. This refresh project
15 represents both replacing legacy communications systems and upgrading to
16 more modern VoIP (Voice over Internet Protocol) communication systems.

17
18 h. Enterprise Metadata Management Project

19 Q. PLEASE DESCRIBE THIS PROJECT.

20 A. This project will deploy new software to enable metadata management across
21 Xcel Energy and will enable numerous capabilities for metadata management
22 and standardization. It will enable the management and publishing of consistent
23 metadata definitions across the Company. It will also leverage the correct
24 metadata and integrate the Company's systems in order to make effective data-
25 driven decisions. This project will also facilitate standardizing metadata for
26 business master data and standardize and consolidate among various sources
27 from programs such as Microsoft Word and Excel.

i. Video Conferencing Enablement

Q. PLEASE DESCRIBE THIS PROJECT.

A. The Video Conferencing enablement project aims to enhance collaboration among employees through standardized conference room configurations and equipment, facilitating efficient remote collaboration by modernizing conference rooms and deploying video conferencing solutions, the project aims to create consistent collaboration experiences across different room configurations and sizes.

j. SAP Continuous Improvements

Q. PLEASE DESCRIBE THIS PROJECT.

A. SAP is the enterprise application that supports the Company's work and asset management, financial general ledger and other important business processes. SAP Continuous Improvements is a multi-year project that will maintain and refresh existing SAP components to ensure reliability and will also deploy new capabilities. For example, a new platform for job scheduling and workload automation will be implemented to replace the current software that SAP will no longer support in the near future. This new platform is expected to provide uninterrupted business process support while enabling new process automation and scheduling tools.

k. DR Technology Refresh

Q. PLEASE DESCRIBE THIS PROJECT.

A. This project will enable the Company to proactively test and implement a new methodology for system recovery during a disaster such as power outages and other system failures that can result in lost data and system issues. The project will help ensure business continuity, regardless of the circumstances. The DR

1 Technology Refresh will replace aging disaster recovery hardware and will
2 provide hardware and software solutions to ensure that the Company will be
3 fully prepared to operate during a situation that could negatively impact the
4 operation of the Company's primary systems.

5
6 l. Facility IT Investments

7 Q. PLEASE DESCRIBE THIS PROJECT.

8 A. This initiative includes the deployment of critical IT infrastructure components
9 to service centers, such as Belle Plaine, or offices. This includes Main
10 Distribution Frames (MDF), Intermediate Distribution Frames (IDF), cabling
11 for workstations and phones, deployment of wireless access points, and the
12 setup of routers, switches, and firewalls to ensure security.

13
14 m. Aging Technology (Small Investments)

15 Q. PLEASE DESCRIBE THIS PROJECT.

16 A. The Company is also placing in service many other smaller projects in 2024 that
17 will address aging IT needs. These smaller projects also enable the Company to
18 keep systems reasonably upgraded to continue to meet business, reliability, or
19 compliance needs. These smaller projects include work like Infrastructure
20 Modernization and SharePoint on-premises upgrades.

2. *Cyber Security*

Q. WHAT CAPITAL PROJECTS RELATED TO EVOLVING CYBER SECURITY THREATS AND REQUIREMENTS ARE INCLUDED IN THE 2024 TEST YEAR?

A. We anticipate a total of approximately \$0.6 million in capital additions in 2024 related to cyber security as shown in Table 9 below. I discuss the projects that comprise the majority of the 2024 cyber security capital additions in the following testimony.

Table 9
2024 Cyber Security Capital Additions
(Dollars in Millions)

NSPM	2024
Project	Test Year
Emergent Demand Security	\$0.4
Vulnerability and Patch Management	0.1
Red Team Program Development	0.04
Grideon Emergency Management	0.03
Unix and Linux Access Control	0.02
Cyber Security (small investment)	0.1
Total	\$0.6

*There may be differences between the sum of the individual category amounts and Total amounts due to rounding.

Q. WHAT IS THE EMERGENT DEMAND SECURITY PROJECTS?

A. These projects are budgeted for cyber security projects to be placed in service in 2024 that will provide continued refreshes for prevention, detection, containment, and corrective services to protect the Company from security incidents, and assist in the recovery from any adverse events. As I discussed above, a challenge facing Technology Services is that cyber security threats are constantly in flux and may result in additional investment in a given year to

1 ensure that cyber security tools and resources are responsive to new threats.
2 Emergent Demand funds earmarked for cyber security ensures that the
3 Company is able to meet these challenges and risks. Projects ultimately chosen
4 to meet these cyber security needs will be formally approved under the TIG
5 process.

6
7 Q. PLEASE DESCRIBE THE VULNERABILITY AND PATCH MANAGEMENT PROJECT.

8 A. Vulnerability and Patch Management are how the Company detects and tracks
9 vulnerabilities in our IT environment to enable risk-reducing updates and other
10 risk mitigation measures to our systems. It is an important part of securing the
11 Company and customer assets and information. The technology investments in
12 this project support the broader Operations Technology Vulnerability and
13 Patch Management Plan that was developed in partnership with the Security
14 and Operations business areas. The scope of the project is broken into two
15 primary areas: 1) Vulnerability Management and 2) Patch Management. The
16 goals of this project include standardizing and automating vulnerability scanning
17 and patch management while expanding these capabilities to additional
18 Operations areas, including Gas, Distribution, and Transmission. The project
19 will also establish the Operation Technology Security Lab to facilitate
20 management of the technologies and associated processes.

21
22 Q. WHAT IS THE RED TEAM PROGRAM DEVELOPMENT PROJECT?

23 A. A “Red Team” refers to a group of people who play the role of an enemy trying
24 to get past the cybersecurity defenses of the “Blue Team.” The Red Team is
25 able to identify strengths and vulnerabilities in a system, which are later reported
26 back to the Blue Team. Currently, penetration tests and Red Team engagements
27 are contracted out to third party vendors, which presents a cost in dollars, time,

1 and resources in order to navigate the internal processes to contract and
2 perform the tests and engagements. The objective of this project is to
3 implement a Red Team for performing internal penetration testing and related
4 engagements, reducing the dependency on external vendors to provide these
5 services.

6
7 Q. WHAT IS THE GRIDEON EMERGENCY MANAGEMENT PROJECT?

8 A. This project will implement a utility-based wildfire management platform that
9 will enable the management of complete incident lifecycle – anticipating threats,
10 preparing for incident management, adapting to changing incident situations,
11 and learning and improving incident management post incident. The project
12 will also deploy a Common Operating Picture (COP), which is a critical tool in
13 managing wildfire response operations. A COP provides a real-time, shared
14 understanding of the incident, enabling responding agencies to work
15 collaboratively and effectively.

16
17 Q. WHAT IS THE UNIX AND LINUX ACCESS CONTROL PROJECT?

18 A. This project will provide consistent access control across servers and
19 applications, including a standard access request workflow, account
20 management, password management, access certification, account vaulting, and
21 preventative/detective access controls. Applying enterprise security standards
22 consistently to the management of privileged access greatly decreases the
23 potential for cyber security compromise and regulatory non-compliance.

24
25 Q. PLEASE DESCRIBE OTHER CYBER SECURITY PROJECTS THAT THE COMPANY IS
26 PLACING IN SERVICE IN 2024.

27 A. These projects include investments that provide prevention, detection,

1 containment, and corrective services to protect the Company from security
2 incidents and assist in the recovery from any adverse events. It is imperative to
3 refresh our technology to ensure continued compliance with regulatory
4 requirements for customer data and overall corporate security objectives, while
5 reducing our business's and our customers' exposure to evolving cyber security
6 risks and vulnerabilities.

7
8 Cyber security investments support the availability, integrity, and confidentiality
9 of our information systems, and help ensure that we meet our legal and
10 regulatory obligations and risk management objectives. Continually evolving
11 cyber security threats and associated regulatory structure require ongoing
12 investment into annual security technology refreshes. These smaller projects
13 include work like Reprivata monitoring sensors, Full Packet Capture project,
14 Service Account Remediation, FireEye IDS-IPS project, and other smaller
15 cyber security projects.

16
17 *3. Enhancing Capabilities*

18 Q. WHAT CAPITAL PROJECTS RELATED TO ENHANCING COMPANY CAPABILITIES
19 ARE INCLUDED IN THE 2024 TEST YEAR?

20 A. We anticipate a total of approximately \$2.4 million in capital additions in 2024
21 related to enhancing capabilities, as shown in Table 10 below. I discuss the
22 projects that comprise the majority of the 2024 enhancing capabilities capital
23 additions in the following testimony.

Table 10
2024 Enhancing Capabilities Capital Additions
(Dollars in Millions)

NSPM	2024
Project	Test Year
Private LTE	\$1.9
Kafka Expansion	0.2
Unmanned Aircraft Systems Program	0.1
End User Services Enhancements	0.1
Network Voice Enhancements	0.1
Supply Chain Procure to Pay	0.03
Enhancing Capabilities (Small Investment)	0.1
Total	\$2.4

*There may be differences between the sum of the individual category amounts and Total amounts due to rounding.

Q. WHAT IS THE PRIVATE LTE PROJECT?

A. Private LTE is a project that will serve both electric and gas assets, with the amounts in this case being the gas-allocated portions. The Private LTE project will enhance the Company's capabilities with regard to its SCADA system, which as I indicated above is a system used by Xcel Energy to monitor and control complex gas processes and equipment in real-time. Under this project, the Company will create and deploy its own private LTE wireless network across its service area, which will supplement the LTE communications network that is currently provided by a third-party telecommunications company. The Private LTE project will improve the resiliency and security of the gas SCADA environment by having an additional layer of connectivity over the current, public communications network, which the Company will continue to utilize as a backup service. Because of this redundant design, there will be

1 fewer outages and fewer instances of field workers being dispatched when
2 communications are lost.

3
4 One of the main benefits of having a private LTE network is the security of
5 information related to the Company's natural gas distribution system (critical to
6 ensuring safe and reliable service for our customers), which will route through
7 the Company's private LTE system rather than the third-party's public
8 communications network. There are also other primary benefits, such as the
9 Company's ability to more efficiently scale up and accommodate the future
10 expansion of IoT devices (Internet of things devices with sensors and other
11 applications) that are integral to our natural gas operations. Once a particular
12 geographical area is covered by private LTE, adding additional devices and
13 sensors has minimal to no additional costs to the network. The Company has
14 determined that its customers would be best served by implementing the Private
15 LTE project now, where large-scale deployment and management of devices
16 necessitate a more robust and consistent connectivity solution than is presently
17 available.

18
19 Q. WHAT IS THE KAFKA EXPANSION PROJECT?

20 A. Kafka is an open source distributed streaming platform that is built for
21 publishing, consuming, storing, and processing streams of data records in real
22 time. Streaming data is consistently generated by many data sources and Kafka
23 enables the Company to handle this streaming data sequentially and constantly.
24 This project involves expanding Kafka to enhance strategic data streaming
25 capabilities.

1 Q. WHAT IS THE UNMANNED AIRCRAFT SYSTEMS PROGRAM?

2 A. This initiative focuses on the enhancement and implementation of a managed
3 drone environment that will allow the Company to operate a fleet of drones
4 across all business units, ensuring regulatory compliance and appropriate flight
5 planning, security of drone data, ability to ingest data into the network and
6 visualize as well as analyze the data on an as-needed basis for each business unit
7 partner. One way that drones are used in our gas operations is to inspect gas
8 pipelines spanning under bridges. For instance, in St. Paul, a gas line attached
9 to the side of a bridge has been inspected multiple times via drone due to access
10 and safety concerns. This innovative approach eliminates the need for a
11 specialized bridge inspection vehicle called a snooper truck. As a result, it avoids
12 the requirement of traffic control or highway shutdown, ensuring minimal
13 disruption to road and railway traffic. The solution will mitigate the risk of drone
14 use, will enable and accelerate the use of drones across all business units, and
15 will lead to efficiency gains in operations while limiting the potential of injury
16 risk for what otherwise would have been manned activities.

17
18 Q. WHAT IS THE END USER SERVICES ENHANCEMENTS PROJECT?

19 A. The project is primarily about streamlining and enhancing the use of Microsoft
20 products and technology to benefit both field devices and corporate devices.
21 The goal is to reduce friction for employees by ensuring they have the right
22 hardware, mobile devices, and software in place and by fully leveraging the
23 Microsoft suite of tools. It includes an upgrade from Windows 10 to Windows
24 11, increased use of Microsoft OneDrive, and enhancing the utilization of
25 Microsoft products.

1 Q. WHAT IS THE NETWORK VOICE ENHANCEMENTS PROJECT?

2 A. This program is designed to maintain, upgrade, and rationalize our voice
3 communication technology systems across Xcel Energy. The project scope
4 includes implementing Unified Communications, a centralized platform that
5 allows employees to manage calls, chats and emails from any device,
6 modernizing legacy analog systems, improving Microsoft Teams integrations to
7 streamline collaboration, and transitioning from the Avaya Cloud to an on-
8 premises Regulatory/Compliance Avaya Core. This transition aligns with the
9 conclusion of the Avaya Cloud Contract in 2024.

10
11 Q. WHAT IS THE SUPPLY CHAIN PROCURE TO PAY PROJECT?

12 A. The objective of this project is to build a comprehensive digital structure that
13 improves data accuracy and transparency to generate insights into spend,
14 supplier transactions, and key supply chain performance metrics. A portfolio of
15 digital tools and solutions will prioritize the implementation of master data
16 cleansing and management, cost modeling, category analytics, a spend control
17 dashboard, a contract labor management platform, a supplier management
18 platform, performance management dashboards, and process automation.

19
20 Q. WHAT IS THE STRATEGIC FIBER DEPLOYMENT PROJECT?

21 A. Under this project, the Company will acquire fiber optic cable assets in order to
22 support enterprise network connectivity. Acquiring fiber allows for more
23 control over technology resiliency, capacity, and architecture. The high
24 availability design of the network makes use of diversity in a couple ways: fiber
25 cabling enters the buildings via two physically separate entrances; and buildings
26 have two fibers available to carry traffic, allowing for one fiber to be cut without
27 an impact to operations. The Strategic Fiber network design is based on a dual

1 entrance topology solution that will use existing and new fiber optic cables in
2 order to maintain operational business partner requirements related to latency
3 (speed of transmission), availability and bandwidth for transmission of
4 information through cables.

5
6 During implementation, the Company will procure new and extend existing
7 fiber optic cables to certain sites in the Twin Cities area. These sites were
8 identified as having high monthly recurring costs typically due to the lack of
9 connectivity options at these locations coupled with the importance of these
10 locations in Xcel Energy's operations, mandating their perpetual and expensive
11 usage. The project will allow for substantial network growth due to the fiber
12 lines being wholly dedicated to Xcel Energy's usage and are therefore not as
13 dependent upon usage as leased/shared circuits. Another benefit of the
14 Strategic Fiber Deployment project is to provide high speed access to various
15 entities that Xcel Energy has relationships with, like public cloud providers such
16 as Amazon Web Services, Microsoft Azure, Google GCP, and various network
17 partners like CenturyLink and Verizon.

18
19 Q. WHAT ARE OTHER PROJECTS TO ENHANCE CAPABILITIES THAT ARE BEING
20 PLACED IN SERVICE IN 2024?

21 A. The Company is also placing in service many other smaller projects in 2024 that
22 will enhance the Company's capabilities. These smaller projects, like large
23 projects, also enable the Company to improve productivity, enhance
24 communications between systems, and between people, and use data more
25 efficiently. Examples of these projects are Network Security Services
26 Enhancements and Route and Switch enhancements.

1 4. *Customer Experience*

2 Q. WHAT CAPITAL PROJECTS RELATED TO ENHANCING THE CUSTOMER
3 EXPERIENCE ARE INCLUDED IN THE 2024 TEST YEAR?

4 A. We anticipate a total of approximately \$1.7 million in capital additions in 2024
5 related to customer experience. The individual projects are shown in Table 11
6 below. I describe the majority of work that encompasses customer experience
7 projects in the following section of my testimony.

8
9 **Table 11**
10 **2024 Customer Experience Capital Additions**
 (Dollars in Millions)

11

NSPM	2024
Project	Test Year
Customer Experience Transformation Phase 3	\$1.7
Customer Care IVR Upgrades	0.1
Total	\$1.7

12

13

14

15

16 *There may be differences between the sum of the individual
17 category amounts and Total amounts due to rounding.

18 Q. WHAT IS THE CUSTOMER EXPERIENCE PHASE 3 PROJECT?

19 A. This project aims to place various customer-facing products in-service, which I
20 describe below:

- 21 • *Pay your Bill:* This project is intended to increase customer satisfaction by
22 enabling customers to pay their bills through a variety of payment
23 methods, including Google and Apple Pay.
- 24 • *View and Understand your Bill:* This product empowers customers to make
25 sense of their bill by providing a variety of approaches: through easy
26 access to current and historical statements, simplified breakdowns and
27 explanations of different rate and tariff components in the bill, and

1 contextual insights to visualize their usage and cost patterns to
2 understand their bill.

- 3 • *On/Offboard*: This solution provides customers with the ability to fully
4 understand the various service offerings that are available to them: from
5 different rate structures to metering and hardware solutions.
6 Furthermore, we aim to create a more accurate and customer-friendly
7 approach to starting, transferring, or stopping service. Today a lot of the
8 process is manual and one of the goals is to automate it, as well as to
9 transmit clear communications (based on customer channel preference)
10 on customers' service status and changes.
- 11 • *Save Money*: This product empowers customers to save money by
12 providing consistent, actionable, and personalized recommendations and
13 solutions that fit the customer needs. These gas saving tips, as well as
14 home heating and cooling recommendations, can be found through all
15 methods of communication.
- 16 • *Optimize Energy Usage*: This tool aims to empower customers to actively
17 understand, manage and automate their energy consumption (past,
18 present and future) through technological innovations, upgrades, and
19 visualizations that contribute to optimized or reduced energy and a clean
20 energy future. The goal is for customers to understand where they are
21 using energy and thereby use that information to manage their
22 consumption.
- 23 • *General Help*: This aims to empower customers to immediately find the
24 comprehensive, relevant, and credible information they desire through
25 assistive, guided, and AI technologies.

1 These investments aim to increase customer satisfaction and provide our
2 customers with a seamless and positive experience when interacting with Xcel
3 Energy through our technology platforms, whether it is on their desktop or their
4 phone. Furthermore, the Company's investments in Customer-facing
5 technologies result in increased first-contact resolution as well as improved
6 (customer service) agent efficiency.

7
8 Q. WHAT IS THE CUSTOMER CARE INTERACTIVE VOICE RESPONSE (IVR)
9 UPGRADES PROJECT?

10 A. This project will be upgrading all Contact Center IVR and dependent Avaya
11 infrastructure to ensure continued IVR business capability across all three
12 customer contact centers plus the Business Solutions Center. This upgrade, as
13 well as the enhancements to the Contact Center IVR environment, will stabilize
14 the platform to support advancing the IVR menu structure from touch tone to
15 Natural Language Understanding. The upgrade is expected to improve IVR
16 usability and increase customer self-service. Furthermore, the upgrade will
17 leverage a higher performing, fault tolerant architecture, cloud technology, and
18 carrier redundancy.

19
20 5. *Emergent Demand*

21 Q. DOES TECHNOLOGY SERVICES HAVE CAPITAL COSTS THAT SPREAD ACROSS ALL
22 KEY BUDGET CATEGORIES?

23 A. Yes. Given the ever-changing nature of technology and emerging cyber security
24 risks, it is not possible to identify all projects that may be needed in a given year.
25 To ensure that we are able to meet our overall objectives, a number of years ago
26 we created Emergent Demand as an efficient way to fund important and
27 unexpected projects.

1 Q. HOW DOES EMERGENT DEMAND HELP ENSURE THAT TECHNOLOGY SERVICES
2 MEETS ITS KEY OBJECTIVES?

3 A. Emergent Demand provides Technology Services with the ability to assess and
4 address, as appropriate, emerging technology needs as they arise. For instance,
5 we may identify a risk associated with existing technology that needs to be
6 addressed earlier than initially planned. In other instances, we might begin
7 implementing new software and then learn of a new function that is cost-
8 effective to adopt at the same time the project is implemented.

9
10 Whether the funding requirement is from a scope change to an existing project,
11 or to address a new risk or a new identified need, Emergent Demand allows us
12 to effectively ensure adequate funding for projects that cannot always be
13 predicted in our fast-changing environment.

14
15 Q. HOW LONG HAS TECHNOLOGY SERVICES MANAGED EMERGENT NEEDS OF THE
16 ORGANIZATION IN THIS WAY?

17 A. We began specifically planning for emergent needs in this manner in 2013. Prior
18 to creation of the Emergent Demand budget we had to delay or cancel
19 previously planned projects or absorb unplanned work and costs when a new
20 technology or critical need was identified. These changes would often disrupt
21 the parts of the business relying on our original plan and would impact other
22 long-term plans that affect the Company, our customers, or both.

23
24 Q. WHAT PROCESS WAS USED TO ESTABLISH THE 2024 TEST YEAR EMERGENT
25 DEMAND BUDGET?

26 A. The current budget for the 2024 test year of about \$0.8 million is based on
27 business priorities for the year, balanced by the overall business area capital

1 spending guidelines. In other words, the Emergent Demand budget reflects the
2 need to ensure adequate funds for emerging technology needs – whether
3 emerging new projects or enhancements to currently planned projects. IT
4 projects funded by Emergent Demand will be approved through our TIG
5 process I identified above, in accordance with our budget process.

6
7 Q. WHAT ARE THE BENEFITS OF BUDGETING FOR EMERGENT DEMAND?

8 A. In addition to being available to undertake emerging projects as I describe
9 above, Emergent Demand allows us to more comprehensively vet requested
10 changes in individual project scope. Before a project team can access Emergent
11 Demand funds, a project must again be reviewed and approved under the TIG
12 process.

13
14 Q. CAN YOU EXPLAIN IN MORE DETAIL HOW REQUESTS FOR FUNDING FROM
15 EMERGENT DEMAND ARE REVIEWED?

16 A. Yes. Requests for funds from Emergent Demand, including any request that
17 may arise for a new project or for more funding on an existing project, are
18 reviewed to ensure need. Emergent Demand therefore provides another layer
19 of governance for existing projects because they must receive an additional
20 round of approval before being allocated funds from Emergent Demand.

21
22 Q. WHAT DO YOU CONCLUDE WITH RESPECT TO THE OVERALL LEVEL OF
23 TECHNOLOGY SERVICES CAPITAL COSTS THE COMPANY IS SEEKING TO
24 RECOVER IN THIS RATE CASE?

25 A. The overall level of Technology Services costs is reasonable, as shown by the
26 above discussion, and is necessary to support an appropriate level of service to
27 our customers. Finally, the costs included in our 2024 capital budget are

1 representative of the types of work we must do year over year.

3 IV. O&M BUDGET

5 A. O&M Overview

6 Q. WHAT IS INCLUDED IN THE TECHNOLOGY SERVICES O&M BUDGET?

7 A. The Technology Services O&M budget consists of costs related to the
8 operation and maintenance of existing IT assets such as software systems,
9 computers, printers, phones, radio systems, and servers. It also includes annual
10 software contract and license fees, as well as maintenance agreements, for
11 existing software and hardware. In addition, the O&M budget includes non-
12 capitalized costs associated with developing, enhancing, and maintaining new
13 or existing IT systems.

14
15 Q. WHAT ARE THE OVERALL TRENDS FOR TECHNOLOGY SERVICES' O&M
16 EXPENSES?

17 A. Overall, O&M expense has remained largely flat since 2020, with a relatively
18 modest increase in 2024 driven primarily by increases in certain areas like
19 Software License and Maintenance expense over that time period, but offset by
20 decreases in other areas.

21
22 Q. AT A HIGH LEVEL, HOW DOES THE TEST YEAR BUDGET ENSURE CUSTOMER
23 VALUE FOR COMPANY INVESTMENTS?

24 A. These investments benefit our customers in several respects. First, as I have
25 discussed throughout my testimony, Technology Services invests in
26 technologies and supporting services that are necessary for system reliability and
27 security, operational decision-making, and improved customer support and

1 business capabilities, which requires the Company to correspondingly incur
2 O&M expense in order to continue to serve our customers and to protect them
3 and our business from cyber security and system failure risk. Second, our
4 investments in technology help other business areas serve customers efficiently
5 and effectively. Finally, our investments are intended to maintain and enhance
6 our service to customers, including in the ways customers interact with Xcel
7 Energy. Without making these investments, we could not provide reliable,
8 quality service to our customers.

9
10 Q. WHAT IS THE COMPANY'S TECHNOLOGY SERVICES O&M BUDGET FOR THE
11 2024 TEST YEAR?

12 A. The total Technology Services O&M budget for the 2024 test year is
13 approximately \$11 million. The basis for this budget is set forth in detail below.
14 I present the Technology Services O&M budget on a State of Minnesota Gas
15 Jurisdictional basis.

16
17 Q. WHAT ARE THE BASIC CATEGORIES OF THE O&M BUDGET?

18 A. The test-year Technology Services O&M budget for natural gas service can be
19 broken down into 8 categories: (1) Network Services; (2) Software License and
20 Maintenance; (3) Company Labor; (4) Application Development and
21 Maintenance; (5) Contract Labor and Consulting; (6) Shared Assets Allocation;
22 (7) Hardware Purchases and Maintenance (including equipment maintenance);
23 and (8) Other. Table 12 below shows the 2024 Technology Services O&M
24 budget by category, in addition to actuals for 2020-2022 and partially in 2023:

Table 12
Technology Services 2020-2024 O&M Actual and Budgeted Expenditures
(Dollars in Millions)
(State of Minnesota Gas Jurisdiction)

NSPM	2020	2021	2022	2023	2024
Cost Category	Actuals	Actuals	Actuals	Forecast	Test Year
Network Services	\$1.1	\$1.1	\$0.8	\$1.2	\$1.1
Software License & Maintenance	2.6	2.9	3.4	3.7	3.8
Company Labor	1.5	1.4	1.5	1.7	1.7
Application Development & Maintenance	1.6	1.6	1.3	0.7	0.7
Contract Labor/Consulting	0.7	0.4	0.8	0.6	0.5
Shared Assets Allocation	2.5	2.2	2.1	2.2	2.7
Hardware Purchases & Maintenance	0.2	0.3	0.3	0.3	0.2
Other	0.3	0.3	0.2	0.3	0.2
Total	\$10.4	\$10.2	\$10.4	\$10.9	\$11.0

*There may be differences between the sum of the individual category amounts and Total amounts due to rounding.

Q. OVERALL, HOW DOES THE 2024 BUDGET COMPARE TO 2023?

A. The 'Technology Services' 2024 budget is approximately one percent higher than the 2023 actuals/forecast. Exhibit___(MOR-1), Schedule 4 and Exhibit___(MOR-1), Schedule 5 also provide further breakdowns of O&M costs. There are certain areas that are increasing O&M expense, such as Software License and Maintenance and Shared Assets Allocation, but other areas are decreasing in 2024 or are relatively flat compared to 2023, which can be attributed to cost control measures and continuous improvements, including resource, management, and work prioritization. Therefore, Technology Services O&M expense is generally flat over these years and is only modestly increasing.

1 I discuss the various O&M categories in more detail below after a brief overview
2 of the O&M budget process.

3
4 **B. O&M Budget Process**

5 Q. HOW DOES THE COMPANY SET THE O&M BUDGET FOR THE TECHNOLOGY
6 SERVICES BUSINESS UNIT?

7 A. Our O&M budget process is similar to our capital budget process in that both
8 are based on a partnership between corporate management of overall finances
9 and the business needs we identify. Company witness Haworth explains how
10 the Company establishes business area O&M spending guidelines and budgets
11 based on financing availability, specific needs of business areas, and overall
12 needs of the Company. Overall, we establish a reasonable annual O&M level
13 that allows Technology Services to complete priorities that are important to
14 providing a reasonable level of services to the Company and our customers.

15
16 Q. DOES TECHNOLOGY SERVICES EVER NEED TO CHANGE THE USE OF BUDGETED
17 O&M FUNDS DURING THE FINANCIAL YEAR?

18 A. Yes. As mentioned earlier in my testimony, Technology Services adjusts for
19 changing business impacts such as updates in technology, customer
20 expectations, operating priorities of the business units across the Company, and
21 the Company finance area. There are times when O&M funds are shifted within
22 Technology Services during the year, typically to address unplanned
23 requirements.

1 Q. HOW DOES THE COMPANY DETERMINE CHANGES IN THE TECHNOLOGY
2 SERVICES O&M BUDGET FOR FUTURE YEARS?

3 A. As part of the Company's annual budget process, Technology Services performs
4 a review of existing services and expected new services to determine budget
5 needs for future years. This includes an evaluation of annual contract cost
6 escalators for vendors, annual merit increases, changes in the quantity of
7 services estimated to be consumed, and new services. This information is
8 reviewed and evaluated through the budget process and a budget is established
9 for Technology Services for future years.

10
11 Q DOES THE COMPANY HAVE A PROCESS FOR MITIGATING DEVIATIONS IN
12 ACTUAL EXPENDITURES COMPARED TO BUDGETED EXPENDITURES?

13 A. Yes. As I previously described for the capital budget, Technology Services
14 management monitors actual versus budget expenditures for both capital and
15 O&M efforts on a monthly basis. Deviations are evaluated and action plans are
16 developed to mitigate variations in actual to budgeted expenditures. These
17 mitigation plans may either reduce or delay other expenditures to support the
18 overall authorized budget. If authorized budget adjustments are required, they
19 are identified and approved at an appropriate level of management.

20
21 **C. O&M Budget Detail**

22 Q. WHAT IS THE PURPOSE OF THIS SECTION OF YOUR TESTIMONY?

23 A. In this section, I describe in detail the components of Technology Services that
24 make up the O&M budget and discuss ways that the Company mitigates O&M
25 cost growth.

1 1. *Network Services*

2 Q. WHAT ARE NETWORK SERVICES?

3 A. This category includes costs related to the maintenance of existing circuits,
4 phones, microwave and radio systems, and other IT network infrastructure
5 assets. Network activities provide operation and management of the Company's
6 internal and external data transmission requirements. Network services are
7 budgeted based on a price times a quantity. These costs are dependent upon
8 Xcel Energy's service usage levels and the number of assets in use. As more IT
9 infrastructure is put in place, network maintenance costs increase.

10
11 Q. WHAT NETWORK ENHANCEMENTS COST CHANGES ARE YOU ANTICIPATING
12 DURING THE TEST YEAR?

13 A. Network services in 2024 reflects the increased usage of the organization's
14 network to support new applications and demand for greater speed and capacity
15 to support existing systems. These usage and demand needs increase each year,
16 as technology advances, new requirements or capabilities are identified, and sites
17 are added. These costs are slightly lower during the test year, however, due to
18 the optimization of carrier costs. This has resulted in cost savings realized in
19 O&M that would otherwise be higher.

20
21 In addition, our network projects identified in the capital section of my
22 testimony allow for growth and measures to control of O&M network costs.
23 For instance, the privatization and leveraging of Company assets, such as fiber-
24 optic transport as mentioned in Section III.B.3, has enabled cost containment
25 for network services.

1 The work executed under Network services also encompasses the need to
2 upgrade and replace aging components of the network. For example, the
3 SCADA circuits that have been in place for many years for transmission and
4 distribution purposes are based on legacy analog technology. That technology
5 is now digital and those new digital circuits require maintenance to keep current.
6 Another example is the Company's investment in expanding the wireless
7 network in its offices and service centers to aid productivity. This expansion
8 places new assets in service that must be maintained.

9
10 Network services costs for the 2024 test year are \$1.1 million.
11

12 2. *Software License and Maintenance*

13 Q. WHAT IS SOFTWARE LICENSE AND MAINTENANCE?

14 A. This category includes expenses for payments to vendors for license
15 agreements associated with various applications and desktop tools used by the
16 Company to perform services. These license payments give users the right to
17 use the software and covers periodic software updates. Additionally, the
18 Company must pay maintenance fees in order to install support patches, install
19 fixes, and receive technical support.
20

21 Q. WHAT SOFTWARE LICENSE AND MAINTENANCE COST CHANGES ARE YOU
22 ANTICIPATING FOR THE 2024 TEST YEAR?

23 A. Software license and maintenance costs have been increasing since 2020 due to
24 new software being placed in service, in addition to the Company needing to
25 keep existing software in support. In particular, there are three major drivers of
26 the increase to the 2024 budget compared to 2020 actuals, stemming overall
27 from increasing costs in the industry. First, software costs are driven in part by

1 net new projects, such as our CXT and Core HR program, which the Company
2 began to implement in 2019 and 2023 respectively, as well as other investments
3 the Company is making. That is, much of IT's increases in O&M are driven by
4 new IT capital investments that benefit the Company's business areas and our
5 customers, but also lead to new licensing and maintenance agreements that
6 increase IT O&M. For example, the Enterprise timekeeping application that
7 was implemented as part of the Core HR project is now hosted on the cloud
8 rather than on the mainframe, which brought about new O&M costs during the
9 2023 forecast year. Second, there are increased licensing costs driven by users,
10 escalators in contracts, upgrades, and replacements. Investments like the Core
11 HR project mentioned above, which replaced various end-of-life technologies,
12 have added new subscription and maintenance fees in order to support the new
13 software applications. Third, maintenance and support must stay current to
14 limit vulnerabilities, such as cyber security threats. Nevertheless, software
15 license and maintenance costs have remained relatively flat in the test year
16 compared to 2023; however, these costs have been a primary driver in the
17 overall increase in O&M expense for Technology Services since 2020.

18
19 Software license and maintenance costs for the 2024 test year are approximately
20 \$3.8 million.

21
22 Q. PLEASE DISCUSS EFFORTS TO MINIMIZE INCREASES IN SOFTWARE
23 MAINTENANCE COSTS.

24 A. There are several approaches used to reduce the growth in this category. We
25 evaluate the usage of desktop software to determine if the usage justifies the
26 continued need for a product. For example, if a computer user has not used a
27 software product recently, we redeploy the license to a user who has requested

1 the software, thereby avoiding the need to purchase a new license for that user.
2 Additionally, Xcel Energy's Supply Chain team reviews expiring contracts and
3 negotiate with vendors as part of the contract renewal process in an effort to
4 reduce costs. For instance, we might extend the term of a maintenance
5 agreement or consolidate various contracts into one in order to receive a
6 discount, right-size a contract to align to actual usage or cancel a contract
7 altogether. In the case of the OSI PI license renewal, we determined that
8 consolidating the licenses used in Technology Services, Transmission and Gas
9 Operations by obtaining an enterprise license that could result in better terms
10 and pricing with vendors. Such efforts have helped us minimize overall
11 increases for software maintenance costs.

12
13 *3. Company Labor*

14 Q. WHAT COMPANY LABOR COSTS ARE INCLUDED IN THE TECHNOLOGY SERVICES
15 O&M BUDGET?

16 A. Our labor costs constitute compensation costs associated with all employees in
17 the Technology Services department.

18
19 Q. WHAT COMPANY LABOR COST CHANGES DO YOU ANTICIPATE FOR THE 2024
20 TEST YEAR?

21 A. Labor costs for the test year are \$1.7 million in 2024, which is materially
22 consistent with the 2023 amount.

23
24 Q. PLEASE DISCUSS EFFORTS TO MINIMIZE INCREASES IN COMPANY LABOR COSTS.

25 A. Company labor costs are based on the employee headcount required to provide
26 IT services to the organization. The employee headcount is managed through a
27 workforce plan process that monitors changes and includes attrition

1 information as well as emergent needs. Changes to employee headcount for
2 replacement related to attrition or for new headcount require assessment of the
3 need for the personnel, the associated risks with not filling the position, and
4 alternative options. This process has worked effectively and assures we have the
5 correct resources in place with the right skills and allows us to manage costs.

6
7 *4. Application Development and Maintenance*

8 Q. WHAT IS APPLICATION DEVELOPMENT AND MAINTENANCE (ADM)?

9 A. ADM includes costs of services to develop, enhance, maintain, and consult on
10 new or existing IT software and hardware applications.

11
12 Q. WHAT ADM COST CHANGES DO YOU ANTICIPATE FOR THE 2024 TEST YEAR?

13 A. Going forward, ADM costs are budgeted to be relatively flat at \$0.7 million in
14 2024 compared to previous years. While in the past ADM costs had modestly
15 increased largely due to added software programs, in 2022, the Company
16 negotiated ADM support with new vendors, which has resulted in a relatively
17 flat budget in 2024 compared to 2023. In addition, we continue to thoroughly
18 evaluate our application portfolio on a regular basis to prioritize which
19 enhancements should be implemented.

20
21 *5. Contract Labor and Consulting*

22 Q. WHAT COSTS ARE INCLUDED IN THE BUDGET AS CONTRACT LABOR AND
23 CONSULTING?

24 A. These costs consist of fees and expenses for professional consultants or
25 knowledge-based experts that are not employees of the Company. This category
26 also includes staff augmentation through staffing agencies.

1 Q. WHAT CONTRACT LABOR COST CHANGES DO YOU ANTICIPATE FOR THE 2024
2 TEST YEAR?

3 A. Contract labor costs are \$0.5 million for the 2024 budget. Actuals from 2020-
4 2023 are higher than the 2024 budget due primarily to a mandatory 90 percent
5 capitalization rule for contractors, as well as more stringent requirements to hire
6 outside consultants.

7
8 6. *Shared Asset Allocation*

9 Q. WHAT IS SHARED ASSET ALLOCATION?

10 A. This category reflects the allocation of Technology Services costs to or from
11 the NSPM operating company, depending on where the asset was purchased
12 and how an investment will be utilized between Xcel Energy operating
13 companies. The dollars associated with this category are, in a sense, a true-up of
14 costs related to a certain investment by assigning to the appropriate
15 jurisdiction(s). This number fluctuates in part on the basis of the jurisdiction in
16 which an investment is purchased, consistent with our capital asset and cost
17 allocation policies discussed by Company witness A. Johnson and Company
18 witness Nicole L. Doyle. For example, the dollars in this account will decrease
19 when an asset is purchased in NSPM but is also utilized in other operating
20 companies.

21
22 Q. WHAT SHARED ASSET ALLOCATIONS CHANGES DO YOU ANTICIPATE FOR THE
23 2024 TEST YEAR?

24 A. For 2024, the budget is \$2.7 million, increasing from 2023.

1 7. *Hardware Purchases and Maintenance*

2 Q. WHAT IS INCLUDED IN THE HARDWARE PURCHASES AND MAINTENANCE
3 CATEGORY?

4 A. Our hardware maintenance costs relate largely to vendor contracts we maintain
5 to support hardware systems. This cost category also includes miscellaneous
6 hardware equipment purchases for materials such as batteries, memory cards,
7 keyboards, headsets, and related technical tools.

8
9 Q. WHAT HARDWARE PURCHASES AND MAINTENANCE COST CHANGES DO YOU
10 ANTICIPATE FOR THE 2024 TEST YEAR?

11 A. Costs for this category are expected to fluctuate based on the work being
12 performed and are budgeted for \$0.2 million in 2024. In comparison to 2023,
13 the 2024 budget has decreased by roughly 28 percent, mainly due to work
14 optimization and resource management.

15
16 8. *Other*

17 Q. WHAT COSTS REMAIN IN THE “OTHER” CATEGORY?

18 A. This category includes very small purchases for administrative materials,
19 distributed systems services, employee expenses, Mainframe, dues, fleet
20 chargeback expenses, and internal building moves.

21
22 Q. WHAT IS THE BUDGETED AMOUNT FOR “OTHER” FOR THE 2024 TEST YEAR?

23 A. Costs in this category are \$0.2 million in 2024.

1 Q. WHAT DO YOU CONCLUDE ABOUT TECHNOLOGY SERVICE'S O&M COSTS
2 OVERALL?

3 A. We have worked diligently in recent years to carefully manage and contain O&M
4 costs, which is reflected in the number of O&M categories with flat expense
5 levels and budgets between past and future years. Where costs are rising, this is
6 primarily due to increased investment in capital, and therefore an increased need
7 for software maintenance and support. As such, our O&M cost levels reflect
8 prudent management, cost containment, and reflects a reasonable amount for
9 the 2024 test year.

11 V. CONCLUSION

13 Q. PLEASE SUMMARIZE YOUR TESTIMONY.

14 A. I recommend that the Commission approve the Technology Services capital
15 and O&M budget presented in this rate case. Our planned capital investments
16 are managed appropriately and established to address aging technology, cyber
17 security, customer experience, enhanced capabilities, and emerging demand for
18 the Company. The budgets we propose are a reasonable representation of the
19 activities we will undertake on behalf of the Company and ultimately our service
20 to customers through 2024 and beyond.

22 Q. DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?

23 A. Yes, it does.

MICHAEL OWEN REMINGTON

414 Nicollet Mall, Minneapolis, MN 55401

PROFESSIONAL EXPERIENCE**Director, Application Managed Services (February 1 2021 to present)**

- Responsible for managing contractual relationship with the company's AMS provider, as well as their performance toward contractual and business requirements.
- Sworn witness for IT business unit in rate cases, riders, and other filings across several jurisdictions.

Director, IT Operations, Xcel Energy, Minneapolis, MN (July 2019 to January 31 2021)

- Accountable for IT service management, critical incident management, disaster recovery, enterprise monitoring, and regulatory compliance.
- Led four managers and an organization of 30 employees.
- Team managed 9,000 IT change requests and 140,000 IT service requests per year; 55,000 device monitors in place, 70 support team referrals per day, and over 1,000 incidents per year resolved prior to an outage.
- Sworn witness for Texas and New Mexico rate cases.

Senior Business Manager, Xcel Energy, Minneapolis, MN (July 2008 to June 2019) (interim assignment below)

- Critical incident manager (on-call rotation): Responsible for representing business and customer interests during technology-related outages or situations of elevated risk.
- Led a team responsible for IT service processes (Problem, Change, Request, and Asset Management).
- Led implementation of a single-pane-of-glass service request portal and automated request fulfillment.
- Drafted effective testimony and discovery responses in support of nine public utility rate cases in three jurisdictions.

Attorney and Solutions Consultant, Xcel Energy, Minneapolis, MN (November 2013 to December 2014)

- A one-year assignment to the General Counsel and Legal Services organization, dotted line report to the Deputy General Counsel.
- Built a constructive relationship between IT and Legal Services. Provided IT leadership with a better understanding of the unique business requirements of in-house corporate counsel.
- Legal practice included transactional work and investigations of whistleblower & EEOC complaints.
- Led the successful implementation of an Early Case Assessment tool (Autonomy Investigator/ECA).

Systems Analyst, IBM Global Services, Minneapolis, MN (October 2000 to July 2008)

- Liaison between the business customers and the IT organization, focusing on the evaluation, selection, architectural design, and implementation of new business applications.
- Received top ratings from both customers and supervising managers.

EDUCATION

- Juris Doctor, *Magna Cum Laude*, Mitchell Hamline School of Law, St. Paul MN (May 2011)
- Certificate in Dispute Resolution, Hamline University School of Law
- Bachelor of Arts, Political Science, University of Minnesota, Minneapolis MN

PRESENTATIONS

- *Information Technology Transactions: Lessons Learned from Real World Cases*, Nov 4, 2019, Minnesota CLE Tech Law Institute (with Michael R. Cohen)
- *Critical Infrastructure Protection - Cyber Security and the Bulk Electric System*, Feb 12, 2019, Minnesota State Bar Association
- *Tailoring Enterprise Incident Management for CIP Compliance*, May 25, 2017, Mid-Continent Compliance Forum

OTHER QUALIFICATIONS, EXPERIENCE AND VOLUNTEERISM

- Licensed Minnesota attorney #0392425
- Minnesota State Bar Association (MSBA):
 - Chair, Technology Committee (2015 to 2018)
 - Council member, Tech Law Section (2018 to 2023)
 - Council member, Public Utilities Section (2021 to present)
- Associate Editor, Hamline Law Review (predecessor of Mitchell-Hamline School of Law)
- Board member, Friends of Saint Paul College Foundation (current)
- Board member, BestPrep (current)

Project Budgeting and Development: Technology Investment Governance Process

A. Initial project budget development

Technology Services' budget development, project prioritization, and project management is facilitated through the Technology Investment Governance (TIG) process. TIG leadership is comprised of senior business area and IT leaders. As part of the TIG process, business and IT leaders are accountable for managing demand intake, prioritization, and business outcomes of the IT projects in their portfolios as they move from project inception towards in-service, thereby ensuring that projects comply with IT portfolio and project management requirements. IT works with each business area to determine its specific IT needs, and then these needs are prioritized based on a particular set of factors. Specifically, each Technology Services area is responsible for partnering with a specific business area within the organization to determine that area's long-term strategic objectives and determine if an IT investment is needed to enable achievement of those objectives. Once a technology need is confirmed, an idea is developed to further refine the scope, associated costs and timeline. Ideas from across the business are gathered and prioritized by TIG leaders, with consideration for expected business outcomes along with budget and resource constraints. The output of these prioritization efforts is the Technology Services budget. The TIG process also oversees and approves any changes in project scope or budget at the corporate level based on overall Company priorities and spending levels.

B. Converting project ideas into the Technology Services budget

From the idea stage, project ideas are grouped and evaluated, ranked, and selected based on a common set of filters. This process weighs a multitude of criteria including: (1) the financial and non-financial benefits of a project; (2) the potential for other existing

technologies to address the business need; and (3) the degree to which the project is needed to meet regulatory requirements or to ensure system reliability and security. This categorization process allows Technology Services to evaluate the benefits and risks associated with each project idea, and results in a list of ranked project ideas.

C. The next step after the project ideas are ranked

Under the TIG process, the Company reviews the ranked project ideas to determine which projects should be implemented and included in the Technology Services budget. This process requires further refinement of the budget figures for each project, and prioritization of possible projects until a final budget is set.

D. How projects are governed once approved for inclusion in the budget

Technology Services employs a “gated” approval process called the “Governance Gates Process” to oversee IT projects throughout their lifecycle. Projects move through specific gates or approvals under the TIG process. The Governance Gates Process enables regular review of project metrics (schedule, scope, deliverables), and institutes corrective action plans or modifications as appropriate.

E. The different gates or approvals that are part of the Governance Gates Process

The five gates that each capital project must complete before it is initiated and ultimately placed in service are as follows: (1) Approval to Initiate; (2) Alignment to Design; (3) Alignment to Build; (4) Alignment to Launch; and (5) and Project Closure.

Gate 1: Approval to Initiate

Once a project is approved into the budget by TIG leaders, project teams

complete a set of deliverables to gain “Approval to Initiate,” the first governance gate that represents the official start of the capital project. Deliverables at “Approval to Initiate” include a delivery checklist, a stakeholder identification and analysis, an official project plan, risk logs, and cost/schedule estimates.

Gate 2: Alignment to Design

The next gate is “Alignment to Design,” The purpose of this gate is to validate project requirements, review refined budget and schedule estimates and begin development of technical plans. The “Alignment to Design” gate includes a technical review by the Architecture and Security teams to confirm that established design standards are followed.

Deliverables needed at the “Alignment to Design” gate include validated project requirements, a security risk assessment, documented Architecture Decisions, and refined project cost/schedule estimates.

Gate 3: Alignment to Build

The next gate is “Alignment to Build.” The purpose of this gate is to review the project plan before construction begins to ensure that the proposed design meets the identified needs, known technical problems are resolved and the project is on track to meet its intended purpose.

At this gate, TIG and IT leaders confirm that the project remains on track to meet its stated objectives. Also, an architectural review is performed to ensure that the project technical design meets established standards and to confirm that known technical issues have been resolved. Additionally, a security risk assessment is conducted to ensure design plans meet cyber security standards. Once all requirements are completed at the “Alignment to Build.” Gate, the

project team can begin to build and deploy the project.

Gate 4: Alignment to Launch

The next gate is “Alignment to Launch”. This gate includes an architectural review to ensure the technology solution is ready to be placed in service. The business unit sponsoring the solution must also approve the project at this stage by confirming that it meets the project objectives, and that the operational procedures and tools (such as user training) are in place to ensure its successful and secure operation in the production environment.

Gate 5: Project Closure

The final gate is “project closure.” This gate is the formal close out of the project verifying the solution has been transitioned to operational steady state, decommissioning of any obsolete technologies and confirmation that project objectives were achieved.

Technology Services 2020-2024 O&M Budget by Category NSPM Gas
