

You are enrolling in a demand response program with Xcel Energy that will enable Xcel Energy to increase the tank water temperature. Please be advised that completing the checkbox acknowledges the following:

1. The tank water temperature can be increased above the customer's setpoint. This functionality could result in hotter water temperatures;
2. In order to reduce the risk that delivered water is substantially hotter than the temperature set point of the water heater, a thermostatic mixing valve conforming to ASSE 1017 must be installed on the hot water supply line following all manufacturer installation instructions or the water heater conforms to UL 60730-1, ASSE 1082, or ASSE 1084; and
3. The thermostatic mixing valve's temperature setting has been adjusted to at or below the water heater's temperature set point.
