

# Max Tap Regulators Implications

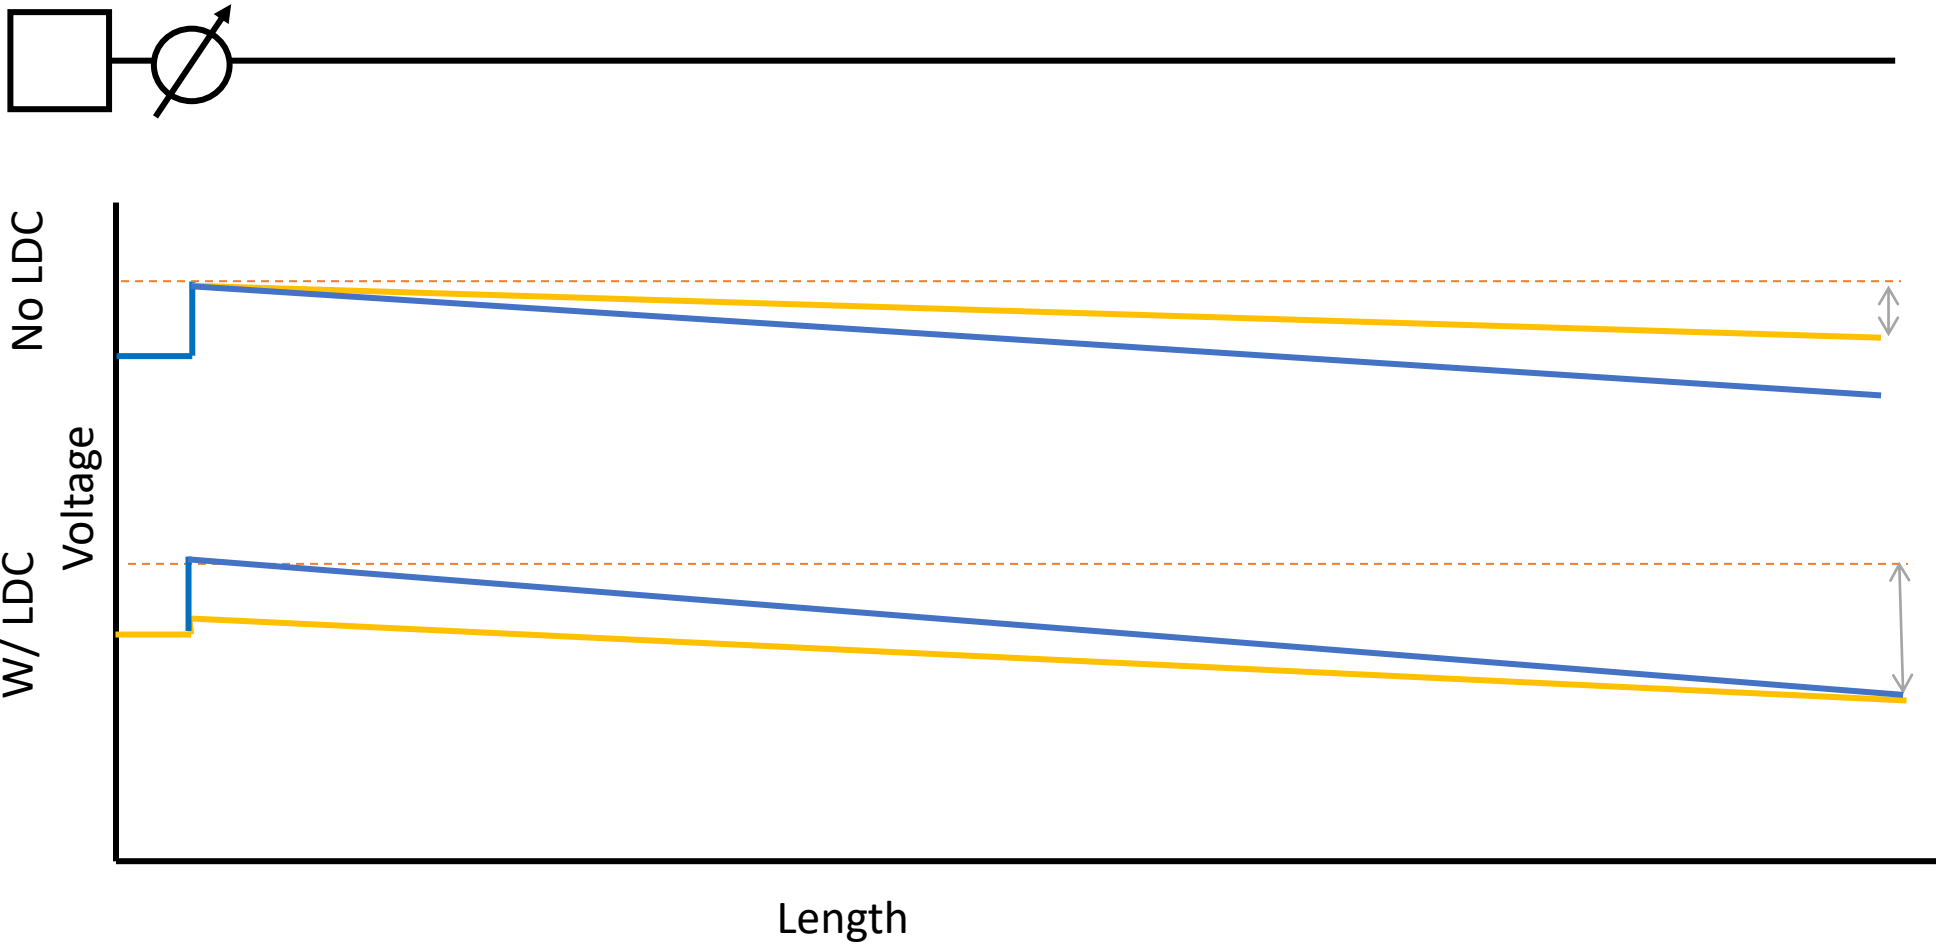

BW = 1.5V  
Center = 128

BW = 1.5V  
Center = 123

- Does the 'max tap regulators' setting increase voltage profile, in worst case by 1.5%, from baseline power flow (reducing voltage headroom by 1.2%)?

# Line Drop Compensation

- Is line drop compensation used and accounted for in the HCA?
