## Winter Construction Notification

Dear Construction Representative:

Winter is fast approaching. This letter is a reminder that from October 1st through April 15th, winter construction charges could be incurred if winter conditions exist at the time Xcel Energy installs your electric or natural gas services.

Winter conditions include frost, deep snow, or excessive mud caused by rain or melting snow. When winter conditions occur, local governing agency tariffs require Xcel Energy to charge the following installation rates:

| Electric   | Natural Gas   |
|--|---|
| \$600 per 10'<br>burn/excavating ft area<br>plus \$3.80/foot | \$400 per 10'<br>burn/excavating ft area<br>plus \$3/foot |

We will make every effort to meet your scheduling requirements in order to avoid these winter construction charges, but communication is very important. **Please work with your Xcel Energy Service Designer to determine your winter charge estimate, should winter conditions occur. Let your Service Designer know if you would prefer to reschedule your service installation until spring to avoid winter construction charges.**

Thank you for your patience as we work together to make it smoothly through the fall and winter construction seasons. **We appreciate your business.**

Sincerely,

Builder Relations  
Xcel Energy
