

## **Solar\*Rewards® Program Rules and Requirements**

The following is a list of program rules and requirements that are valid for all applications.

- Applications will be reviewed in the order of submission. Deposits (and other documents) cannot be hand-delivered.
- For new construction situations, a permanent account must be setup, and we must receive documentation of square footage at the time of application submission in order to review the application.
- No changes will be allowed to the address, account number, premise number or customer name on the application. These must be correct upon submission.
- Array and inverter information must be correct at the time of application submission, and must match the information on the line diagram.
- The name of the installer or developer listed on the application cannot be changed, unless if the customer notifies us in writing that in their opinion the developer has abandoned the project and the customer provides to us the name of the replacement developer.
- All applications are subject to the 120% rule, which is calculated at the time of application review. If the system size changes, the 120% rule will be re-calculated and verified before the meter is ordered.
- During the application process, you are allowed to change your system size by +/- 10% without penalty. If the system changes by more than 10%, your application will be cancelled .
